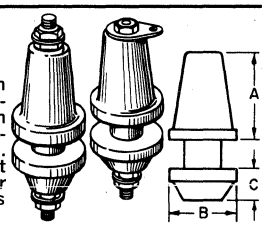
BIRNBACH FEEDTHRU INSULATORS



Made of highly vitrified, low absorption porcelain smoothly glazed to prevent accumulation of dust or dirt. Maximum strength is achieved by the proper proportions and flat mounting surfaces. Long insulating sleeves on the lower part of the insulator contribute much to their performance on high voltages. Brass nickel-plated hardware.

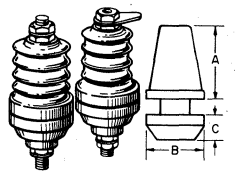
CORRUGATED FEEDTHRU INSULATORS



The six new corrugated type feed-thru insulators have more than twice the leakage path of the straight type because of increased surface of the corrugations and recommends itself where a straight side insulator of equal height is not satisfactory because of its shorter leakage path. Brass nickel-plated hardware and cork mounting washers supplied.

HIGH VOLTAGE FEEDTHRU INSULATOR

This insulator has been designed to meet the demand for an insulator having high dielectric and mechanical strength. The extra long leakage path is made possible by the corrugations on the top insulator. The bottom sleeve taper from a base dia. of 1 3/16" where the electric stress is greatest.

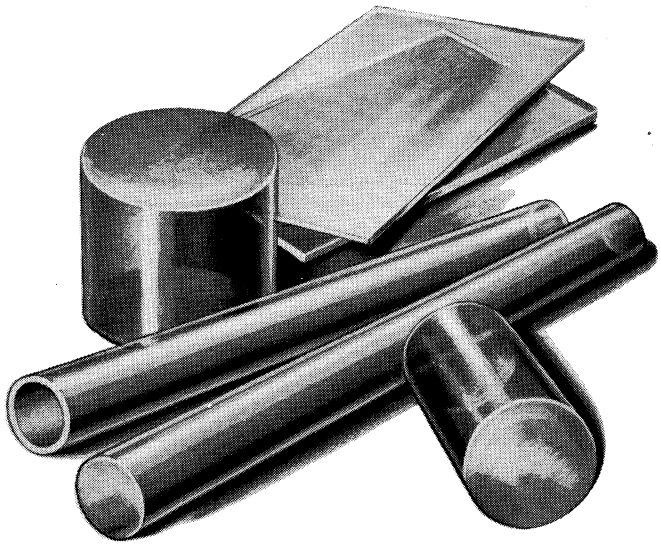
Polystyrene

ROD TUBING SHEET



For radio and electronic applications, because of its very low loss factor at ultra high frequencies, Polystyrene is the ideal material for insulators, coil forms, shields, etc. It has excellent arc resistance, is non-tracking and has splendid insulating properties. Because its water absorption is practically zero it has excellent dimensional stability.

A-C OPERATION — Standard SLO-SYN Synchronous/Stepping Motors are permanent magnet a-c motors having extremely rapid starting, stopping and reversing characteristics and a slow basic shaft speed of 72 rpm synchronous with a line frequency of 60 cycles. Three-lead types need only a single-pole, three-position switch for complete forward, reverse and "off" control. No excessive inrush current when energized because starting and operating current are nearly identical. Can be completely stalled without overheating and with no harmful effects on components. Starts or stops in less than 5° of shaft rotation; no need for mechanical or electrical braking. When used with an auxiliary high speed motor, the SLO-SYN motor can remain coupled to the load and safely overdriven. Phase shifting resistor and capacitor must be used when operating from a single-phase source but not from two-phase. All standard motors are rated for continuous duty at maximum ambient temperature of 40°C. Types SS150 and SS152 use Class A insulation; all others have Class B.

D-C STEPPING — When used for phase-switched d-c stepping, the motors can be connected to provide either 100 or 200 steps per revolution. Accuracy of the steps is ±.09° noncumulative. Three-lead types require a center-tapped d-c supply and single-pole, double-throw switching; four-lead types require a single-ended power supply and single pole, double-throw switching. Bifilar motors can also be used with transistorized switching circuits. With a suitable control potentiometer instead of switches, a SLO-SYN motor can be made to rotate steplessly, permitting extremely accurate positioning. All motors have lubricated-for-life bearings.

Types TS50 and TS52 are similar to standard models but operate at synchronous speeds of 200 rpm and take 36 or 72 steps per revolution when used for d-c stepping.

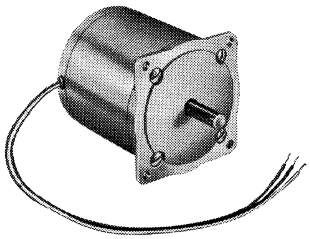
Synchronous / Stepping Motors FOR A-C CONSTANT SPEED • FOR D-C STEPPING



TYPES LS50 & LS52

24 RPM

When used as an a-c motor, a type LS50 or LS52 motor has a shaft speed of 24 rpm synchronous with a line frequency of 60 cycles. When used for d-c stepping the motors take 600 incremental steps to make one shaft revolution. These 0.6° steps are accurate within ±0.03° noncumulative. Ratings for stepping applications are 30 volts d-c, 0.25 amp. per winding for type LS50; 60 volts d-c, 0.15 amp. per winding for type LS52 and 3 volts d-c, 4.0 amp. per winding for type LS50-1001. Ratings for a-c applications shown in chart.

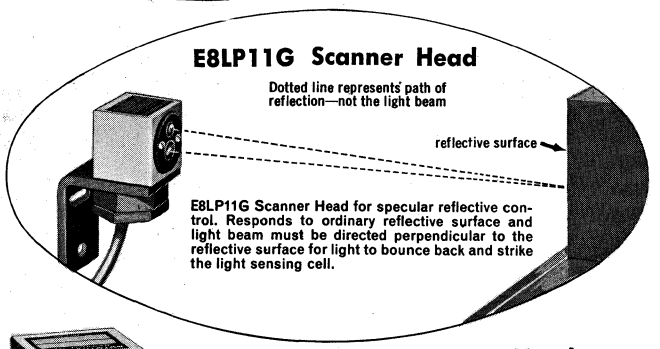
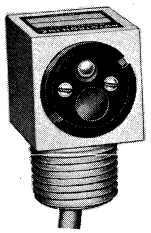
Miniature Photo Reflective Heads and 800B Transistorized Control

E8LP11G Scanner Head

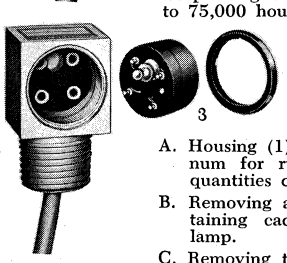




E8LP11G Miniature Scanner Head

For high speed scanning service in minimum space. E8LP11G Scanner Head combines the fast acting cadmium selenide cell and the light source lamp in a single miniature housing (approximately ⅞ inch in all three dimensions plus ⅜" male pipe thread connection. See dimensional diagram below.)

The light sensing element is a fast response, cadmium selenide cell. The lamp has a built-in lens. An infrared filter helps protect against ambient light. The lamp rating is 2.5 volts at .5 amperes-life expectancy up to 75,000 hours depending on operating voltage.

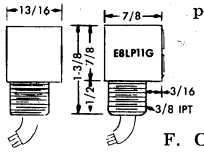


Unique Design—Rugged Construction

A. Housing (1) is precision machined from bar aluminum for ruggedness and stability. In production quantities can be furnished in specified colors.

B. Removing a ring nut (2) releases capsule (3) containing cadmium selenide cell and light source lamp.

C. Removing two screws from capsule (not visible in photo) permits replacement of cell and lamp.



D. Polarized design assures correct position on four spring loaded contacts (4) when capsule is inserted in the head.

E. 6-foot cable is factory-connected to terminals in housing.

F. Cable, terminal connections and contact base are encapsulated in the housing with epoxy resin.

E8LP11G Scanner Head including mounting bracket, also 6-foot factory-connected cable with cable grip and seal for connecting to 800 control. **$28.75**

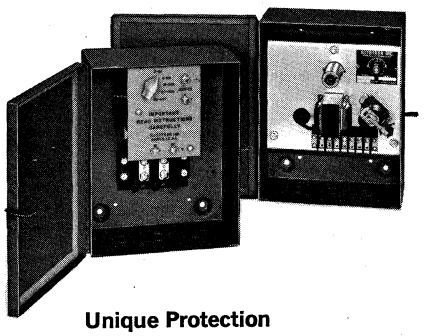
Current Surge Overload Protection



Unique Protection for tools, equipment, personnel

The Surj-Switch uses electronic amplification for instant reaction to variations from normal load current. Easily adjusted on the job to operate at the desired value.

The 10-amp, SPDT Control Relay may operate a warning signal, a lubricating circuit, feeding rate control, etc. without interrupting operation or may be used to stop operation.

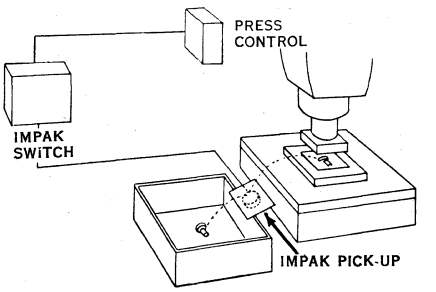
Used on surface grinders to warn when excessive pressures are applied; on machine tools to warn when tools become dull; on automated installations; **whenever load change indicates trouble.**

Model K1 Surj-Pick-up. Required for operation of Surj-Switch Controls—for 50-60 cycle, 0 to 80 amperes, one or 3-phase, any voltage..**$35.00**

Model J Surj-Switch. For overloads,.....**$55.00**

Model JA Surj-Switch. For under loads....**$65.00**

Impak-Switch Die Protection



In the above diagram each piece properly ejected from the die strikes the impact sensing plate which actuates the Impak Control and the Control re-cycles the press control for another stroke.

The impact of falling parts against the sensing plate of the Impak-Pick-up activates the Impak-Switch. Objects may be of practically any reasonably uniform size, ranging from ball bearings to heavy stampings, etc.

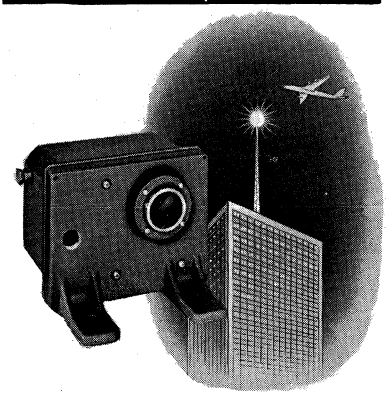
In other die protection applications the Impak Control has time delay set to barely exceed the complete stroke cycle of the press. Each properly ejected piece re-cycles the Impak Control before the timing period expires.

Model V Impak-Pick-up—with 6-ft. shielded plastic-covered cable.....**Net $30.00**

Model Z Impak-Switch—for use where impact is not less than one ounce falling 2 inches and each object strikes only once.....**Net $60.00**

Model C3 Impak-Switch—for use where impact force is limited, where high speed is required or where objects may strike more than once. **Net $145.00**

A2BX Solar ON/OFF Control



Automatically turns lights "ON" at preset light value—and turns lights "OFF" when light exceeds preset value.

DPDT Control Relay energizes when light exceeds intensity for which control is set; de-energizes when light falls below the preset level.

In case of tube failure the relay de-energizes; providing same control action as when light falls below preset level.

Dual Time Delays prevent operation by either momentary light flashes or shadows. Modern, simple circuitry uses one rugged, premium type power tube. Light intensity adjustment from outside of housing. Gasket-sealed cast aluminum housing, tapped for ½″ conduit. For 115/230 v, 50-60 c. Power consumption, 20 watts

Available with three adjustment ranges:

No. A2BX-.2; 1 to 5 fc for street lighting, parking lots
No. A2BX-.5; 15 to 50 fc for signs, parking lots
No. A2BX-1; 20 to 150 fc for obstruction or tower lights

A2BX Solar Control (all models) Net $76.95

Tubeless Bin Level Control

Tubeless Photoelectric actuation—**unaffected** by pressure of material in the bin. Only rigid, non-moving Lucite probes project into the bin. Cast aluminum, gasket-sealed housing mounts to bin wall as shown. Removal of cover makes all parts accessible. Dust-covered plug-in DPDT 8-ampere relay provides ON/OFF control for either high or low bin level. All wiring connections brought out of case in 3-foot oil-proof cable. For 115/230V, 50-60 C.

HOT-STAMPED OR ENGRAVED LEGENDS

Short and Long Cylindrical Datacaps can be hot-stamped with one to three digits of standard size, as follows:

1 DIGIT, 13⁄64" high (18 pt. type)
2 DIGITS, 11⁄64" high (14 pt. type)
3 DIGITS, 9⁄64" high (12 pt. type)

These standard sizes of Legends will be provided in a uniform manner per order — i.e., the size of type will be determined by the longest legend in each individual order. Standard — BLACK. White, red, green or blue hot-stamping can be supplied to order. Also available — colored legends on black or grey lenses.

STOVEPIPE or ROTATABLE CYLINDRICAL LENS

This omnidirectional stovepipe lens is molded of high heat plastic to a special design. About two-thirds of the lens is "fluted," and the remaining portion is smooth. This produces clear light framed by a sparkling "halo" when viewed from the front. Softer light is afforded along the "fluted" sides The NE-2D or NE-2J Neon Lamp enters high into the lens for best effectiveness.

Whether used on the front insertion or the back insertion assembly, the stovepipe or cylindrical lens cap is readily removable from the front of the panel, thus making the lamp accessible for easy replacement.

In these Oil-Tight Indicator Lights, a high degree of resistance to shock and vibration is achieved by the use of the rugged *Neon* lamps on 120 and 240 V; and by choosing low voltage *Incandescent* lamps with short filaments, such as No. 44 or No. 1866 for circuits powered by transformers stepping down to 6.3 V.

Exclusive Features: Assemblies for use with NE-51 Neon Glow Lamps have *"built-in"* resistors—an exclusive *Dialco* feature (U.S. Pat. No. 2,421,321). *Options include:* binding screw, soldering or quick connect terminals. 7 lens colors are available; see bottom of page 965 for method of specifying color.

A FEW FEATURES ABOUT DRAKE PRODUCTS

RELIABILITY . . .

DRAKE'S primary business, for more than three decades, has been the design and production of Miniature Lighting components. This long experience assures you of the most advanced design, the most practical and serviceable construction, and the most expert manufacture. Here are just a few typical DRAKE "plus" features:

1. Seamless drawn bayonet shells. Will not open up as lockseam shells do.
2. All resin impregnated fibre insulation, "Vulcoid".
3. Brass center contact rivets.
4. Molded phenolic or nylon shell housings.
5. Coil springs for center contact support that do not take a set.
6. Guaranteed to meet specifications as listed.
7. All steel parts protected with a suitable noncorrosive finish, such as cadmium.
8. 100% test of all units rated at 115 volts breakdown. This outstanding quality has been a major factor in satisfying the thousands of customers, including the "giants" as well as smaller manufacturers, whom we have supplied for many years. And you'll find DRAKE's traditional *"Personalized Service"* an added asset of inestimable value.

DRAKE EXCLUSIVE DRAKE "MF" PRESS-TO-TEST

The exclusive construction of DRAKE'S 5131, 5138, 5141 and 5148 Series "MF" "Press-to-Test" Indicator Lights provides an instantaneous and highly reliable check of indicator lamp condition—the most common cause of indication failure.

A slight pressure on the lens cap of the indicator light "breaks" the normal signal circuit to the lamp, and connects the lamp to a test circuit (see wiring schematic at right). This simple procedure immediately informs the operator that:

1. If indicator lamp lights, the lamp is OK.
2. If indicator lamp fails to light, it is burned out and should be replaced.
3. If indicator lamp lights in test circuit, but failed to light in the signal circuit when it should have, the signal activating switching should be checked.

General features of "MF" indicator lights will be found at the top of Pages 2 and 3 in Folder 6304. Data at the top of Page 4 does not apply.

Lamps that may be used and their characteristics will be found in the table "Lamp Data—Incandescent Lamps" at the top of Page 5 in Folder 6304.

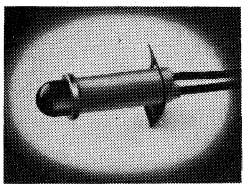
OMNI-GLOW PILOT LIGHT



For use on instrument panels, appliances, switchboards, all electrical and electronic apparatus. OMNI-GLOW will last in excess of 10,000 to 25,000 hours of operating life.

With built- in glow lamp and current limiting resistor, all mechanical spring contacts are eliminated, providing a cost-saving, rugged unit relatively free from failure due to vibration or shock.

Easy mounting — only a ½" hole required for any panel thickness. Instant fastening — speed nut assures permanent shock and vibration-proof attachment.

Drawing less than 1/10 watt at 115 volts, long life, high reliability operation is provided over the 75-150 volt range; can also be used at higher voltage with decreased life.

Nylon body and acrylic lens assembly is 1 15/16" long overall. Lens extends 1/32" in front of panel. Black plastic (105°C) leads are 4½" long, stripped and tinned ½".

Four standard models have red (Model #1010A1), clear (Model #1010A2), amber (Model #1010A3), or white translucent (Model #1010A4) lenses.

Furnished complete with lamp and speed nut. OMNI-GLOW is UL approved—CSA Approval No. 13346.

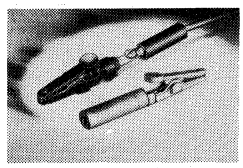
SAFE-T-KLIP

(U.S. Patent 2,754,490)



New convenience and safety are realized through the use of 100% insulation on these test clips. Tough nylon insulation covers the entire clip, including the nose, without the bulkiness of rubber boots or insulating tape. Danger of short circuit due to clips touching each other or other components is eliminated, and test leads may be changed from one connection to another without cutting the power in the equipment.

Available in pairs (one red, one black) SAFE-T-KLIP incorporates a cadmium plated steel alligator clip and provides shock-proof, short-circuit proof operation in excess of 600 volts. Width of the clips is 3/8"; maximum height is 5/8".

Six models are available.

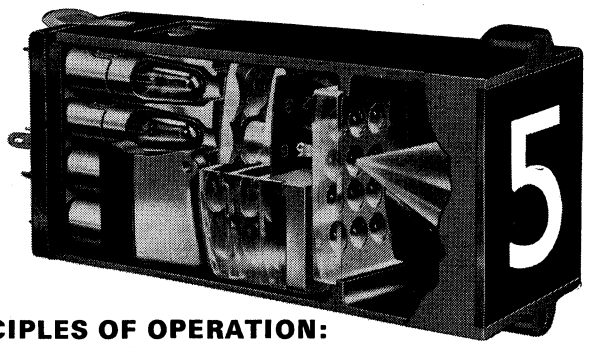
REAR-PROJECTION, SINGLE-PLANE, 12-POSITION READOUTS

FEATURES:

- Single-plane presentation for crispness, not visual hash.
- Bold, bright indications for high readability at wide angles, long distances, in brightest light.
- 12 message positions per readout. Colors, polarity, decimal points available.
- No moving parts for unlimited unit life; lamps easily replaceable.
- Low voltage operation.
- No filters, screens, or shades required.



PRINCIPLES OF OPERATION:

Cut-away of IEE Series 10 readout shows basic principles of IEE's patented rear-projection, single-plane operation. Photographic film containing up to 12 individual messages is mounted in front of 12-lamp assembly. As one or more of these lamps is lighted, the corresponding message is projected on the front viewing screen by a set of lenses. Because the presentation is entirely single-plane, only the message being displayed is visible; the other messages are totally invisible.

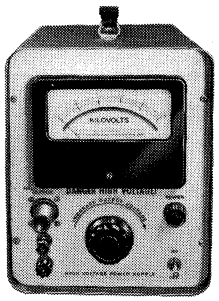
HIGH VOLTAGE POWER SUPPLIES

PORTABLE HIGH VOLTAGE DC POWER SUPPLIES



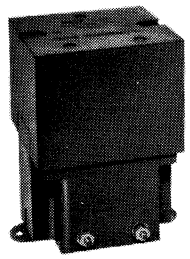
One of the most popular power supplies on the market. Completely redesigned for greater ruggedness and convenience of operation. Widely used for powering electronic equipment and for routine breakdown and insulation testing. Output voltage is well filtered D.C. which is adjustable with convenient front panel control. Input is 115 Volt, 60 cycle A.C. Larger 6" precision 1% mirror scale movement available on order. Regulated models offer closely stabilized output voltage regardless of line or load changes.

NOTE: Regulated power supplies are of the radio frequency type (RF) and adjust from approximately 20% to full rated voltage. Regulation is in the order of ±1% over most of the range. These supplies are rated at 100 microamps. Transformer operated unregulated supplies are available in 5 milliampere types and have a range of zero to full voltage output. These are recommended for industrial service applications. When ordering add the proper prefix to the basic model number, for example, RF, or 5 MA, depending on your requirements.

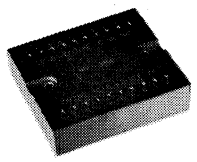
Model	Max. Voltage	RF	5 MA
6000-1	1 KV	—	$200.00
6000	2.5 KV	$175.00	225.00
6005	5 KV	185.00	250.00
6010	10 KV	200.00	275.00
6015	15 KV	225.00	300.00
6025	25 KV	275.00	350.00

OPTIONS: Mirror Scale Higher Accuracy Meter. Recommended for more exact calibration or test purposes. (Illustrated) $50.00. **Additional Built-In Current Meter** (both meters are 3 inch size), including automatic meter protector circuit $50.00.

PACKAGED POWER SUPPLIES AND ZENER REGULATIONS



PACKAGED POWER SUPPLY



ZENER REGULATOR

These new low-cost units make D.C. voltage problems easy. Just wire input and output connections, and the unit is ready to operate. Building block construction provides a basic transformer, a rectifier unit, and where necessary a regulating device. These three elements bolt together quickly and maintenance is simplified should any of the components fail. Each of the three basic building blocks are mechanically constructed in a molded Diallyl Phthalate shell and encapsulated with epoxy resin.

The output is completely isolated and either post may be grounded or the unit operated as a floating supply. The D.C. voltage is filtered and provides 5% or less ripple. Output may be varied from full rating down to zero by simply inserting a small adjustable transformer in the input. Most units are rated for 5 MA current. Power supplies 7.5 KV and higher have modified mechanical construction from that described above. Input 115 V, 60 cycle.

Use with High Voltage Zener Regulators to obtain 1% line and load regulation.

* If necessary, insert a series resistor to limit zener current to under 5 MA.

Simply connect in parallel* with any high voltage power supply and automatically obtain line and load voltage regulation as well as ripple reduction. Nominal current rating is 0.5 to 1 MA for better than 1% stabilization. Regulation over range of 0 to 5 MA is 3%. Can be wired in series for high voltage service (five 4,000 volt types to regulate a 20,000 volt power supply). Twenty built-in taps included, each provides a regulated voltage to an accuracy of 20%. Ideal for photomultiplier tubes. Use as a high voltage reference in conjunction with regulator amplifier circuitry.

HEAVY DUTY DC POWER SUPPLIES

These industrial type power supplies are built for service and efficiency. All are of the transformer type and employ husky components that have been selected for their power handling capacity. Controls are arranged so that operation is simple and the units contain a number of safety features for protection of personnel and equipment. Output is continuously variable from zero to full rated values. These supplies are unregulated and standard ripple is 5% or less. Ripple of from 0.01% to 1%, and regulated supplies are available on special order. All power supplies have automatic overload cutout control circuits.

HIGH VOLTAGE POWER SUPPLIES

COMPACT PSL SERIES

THE PSL SERIES of compact power packs are designed to operate from the most commonly used line frequencies of 50 CPS to 500 CPS. Input voltages are 118V, 220V, 230V, and 240V*.

THE PSL SERIES Power Supplies have these important features:

1. Input Voltage 0 to rated input voltage* at 50 to 500 CPS.
2. Output Ratings 0 to 10 milliamperes in accordance with the rating of the power pack.
3. Ripple 1% RMS or 2.75% peak to peak at rated voltage.
4. Output Voltage can be varied from 0 to rated voltage and load by means of a variable auto transformer.
5. Two Output Terminals are isolated from the container, permitting either terminal or both to be operated away from ground.
6. Ambient Temperature Range is minus 55°C to plus 85°C (with limited ratings).
7. Mounting Position: Any.
8. Altitude up to 10,000 feet operating 50,000 feet non-operating.
9. Design Life 40,000 hours at 35°C and 25,000 hours at 65°C at rated output. Life is 5000 hours at 85°C if the output current is no more than 80% of the rated current. Useful life is generally double the figure given above if an approximately 3% drop in voltage is tolerable.

CONDENSER PRODUCTS has designed and built high voltage D. C. power supplies for:

- Electrostatic Equipment
- Airborne Equipment
- Shipboard Installations
- 380 to 1.000 CPS Applications
- High voltage output from 1 to 250 KV with current ratings up to 50 ma.

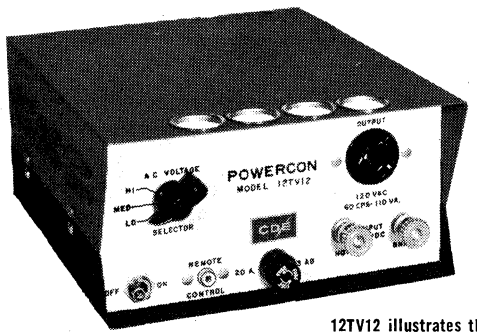
POWERCON® INVERTERS



12TV12 illustrates the modern styling of the POWERCON® inverter line.

POWERCON® inverters feature all new designs and attractive styling to provide the ultimate in inverter power supplies for providing AC power in autos, trucks, aircraft and boats. Units are ideal for operating a wide variety of electronic entertainment devices as well as small appliances and lighting equipment.

The 12TV12 illustrated, has met with enthusiastic acceptance. This model is intended for operation of portable TV sets as well as other household appliances within the rating. Other models in the POWERCON® line feature the same attractive styling as the 12TV12. The combination of attractive design and superior power supply design features makes the POWERCON® Line the outstanding buy in mobile, aircraft and marine power supplies.

Models are available with either square wave or sine wave outputs. Square wave models have stable 110v AC under various loads due to built in capacity and conservative ratings. Intermittent loads will not damage the unit. Intermittent ratings listed are for loads with 70-100% power factor. Square wave units feature superior filtering and solid mechanical and electrical design to give hash-free output for interference free TV, FM and shortwave reception.

The sine-wave units have added reactors and capacitors to provide true sine-wave power — indistinguishable from commercial power. These units are recommended for electronic equipment where optimum performance is required. The sine-wave units control output voltage between 110 and 120v AC with up to 15% input variation. Units feature automatic load regulation for heavy or light loads. Sine-Wave units will operate inductive loads as low as 25% power factor without power factor correction as long as the wattage rating is not exceeded and the inrush VA does not exceed the intermittent ratings.

AC VOLTAGE STABILIZERS

For Electronic and Electric Equipment

ELECTRONIC INNOVATIONS IN ACTION

General Electric a-c voltage stabilizers are static-magnetic transformer-type products which provide voltage maintained within ±1% variation while input line voltage fluctuates ±15%. They are offered in the following variations:

Unfiltered output: output voltage waveform is relatively flat-topped, with harmonic content from 15 to 20%.

Harmonic filtered output: output voltage is filtered to near sinusoidal waveshape, with a maximum of 3% harmonic content.

Enclosed construction: completely metal enclosed for safe external mounting.

Open construction: for installation within electronic or electric equipment.

SINGLE PHASE—Magnetic-capacitor circuitry is frequency sensitive. Stabilizers designed for one frequency are not suitable for use on another.

THREE PHASE—Standard single-phase a-c voltage stabilizers can be connected for 3-phase, 4-wire loads with input connected delta. However, single-phase models cannot be connected for 3-phase, 3-wire loads: select from 3-phase dela-delta models.

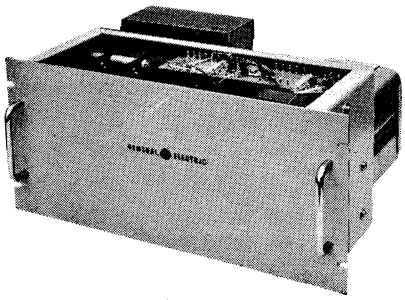
STABILTRON* AC VOLTAGE STABILIZERS

ELECTRONIC INNOVATIONS IN ACTION

For Electronic and Electric Equipment Requiring PRECISE Voltage Control

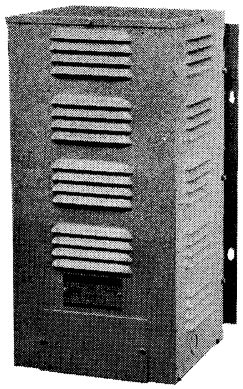


PANEL CONSTRUCTION is suitable for standard 19-inch rack mounting.

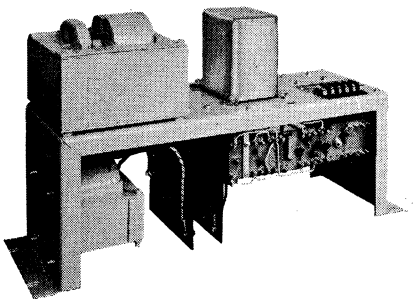
General Electric Stabiltron a-c voltage stabilizers can be used in a wide variety of electronic equipment applications where precise control of voltage is required. The Stabiltron consists entirely of static components — there are no tubes to burn out or moving parts to replace or maintain.

The Stabiltron senses deviations from a predetermined output voltage level by an error detector. The error signal, through the silicon-controlled rectifier circuit, augments the voltage stabilizer action and provides almost instantaneous correction of output voltage.

Typical applications include computers, radar and communications equipment, industrial process control, and X-ray equipment.



ENCLOSED CONSTRUCTION - 2-kva units are suitable for either wall or floor mounting, 5- and 10-kva units for floor mounting only.



OPEN CONSTRUCTION is suitable for horizontal or vertical mounting surfaces in equipment enclosures.

Input Voltage — The most common power source voltages can be handled by the standard models listed. Stabiltron units can be provided for special voltage levels on request.

Output Voltage — Stabiltron voltage stabilizers maintain extremely precise voltage output in spite of wide fluctuations of line voltage, frequency, load, load power factor, and ambient temperatures.

The table below illustrates the effect on the output of the maximum steady state excursions, within rated limits of some of these variables.

TABLE 1 — TYPICAL OUTPUT VOLTAGE CHARACTERISTICS

Variable	Excursion	Output Voltage Bandwidth¶
Line voltage†	95 to 130	0.02 to 0.2%
Frequency	57 to 63 cycles	0.15 to 0.4%
Load	0 to 100% rated load	0.02 to 0.1%
Load power factor	0.4 lagging to unity	0.01 to 0.1%
Ambient temperature	−25C to 40C	0.01%/degree C

¶ A range is indicated because exact amounts are dependent on the static level of other variables.

† When the Stabiltron unit is operated at less than rated load, the line voltage can be reduced considerably below 95 volts without serious deterioration of the output voltage.

Response — Under transient line or load conditions, elapsed time for correction of output voltage and transient excursion from the normal bandwidth are key considerations to equipment operation.

The Stabiltron provides fast response and small transient excursion through its unique combination of solid state and magnetic circuitry.

TABLE 2 — TYPICAL TRANSIENT RESPONSE CHARACTERISTICS

Transient Change	Percent Peak Output Voltage Excursion	Response‡ Time	Total Recovery§ Time
0 to 115V input	14%	4 cycles	13 cycles
95 to 130V input	14%	3 cycles	8 cycles
130 to 95V input	9%	5 cycles	9 cycles
0 to 100% rated load	24%	1 cycle	2 cycles
20% to 100% rated load	21%	1 cycle	2 cycles
100% to 20% rated load	34%	1 cycle	10 cycles

‡ The time required for the output to recover 63.3% from its maximum excursion.

§ The time required for the output to recover to normal bandwidth limits.

Harmonic Content — Under all rated ranges of line variation and most load conditions, the total harmonic content of the output wave form will not exceed three percent for a sine wave power source. Even under adverse conditions, when the power source is not a sine wave, the Stabiltron voltage stabilizer will correct the wave form to the load to approximately three percent harmonic content.

Rectifier-filter Loading — Since the output wave form is low in harmonic content, the Stabiltron voltage stabilizer can be connected successfully to a rectifier (capacitor input) filter load to the input of a d-c power supply having capacitor input filters.

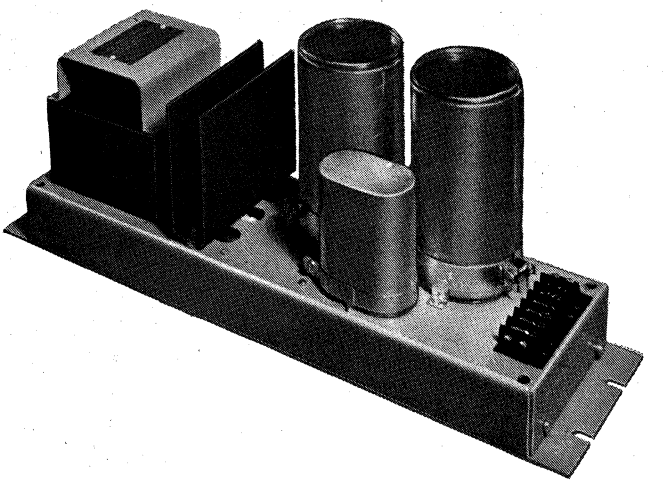
REGULATED DC POWER SUPPLIES

ELECTRONIC INNOVATIONS IN ACTION

Improve Performance of Computers and Other Electronic Equipment



These component power supplies can be used in a wide variety of applications where relatively constant d-c voltage is required despite fluctuating line voltages. Computers, process control equipment, and electronic measuring devices are typical applications where demands for accuracy require constant regulation of voltage.

Performance-proved G-E d-c power supplies can be designed to suit your needs for either 50- or 60-cycle power sources.

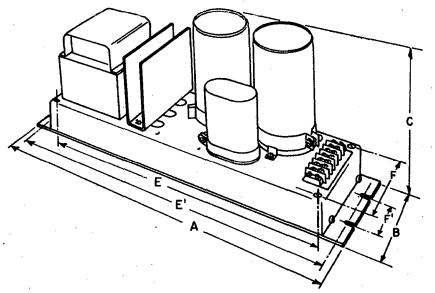
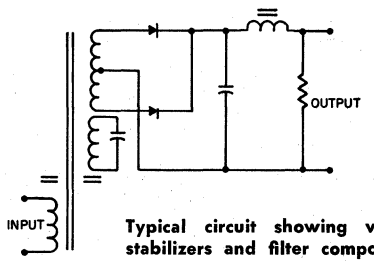
† Ripple 1% RMS. All standard units come equipped with a plate for 19-inch rack mounting.
‡ Indicates approximate percent increase in output voltage due to increase of load current from full load.
§ Rack mounting plate has four mounting slots on each end. Distance between centers of two outer slots is 7½ in., between two inner slots 3 In.



Mounting holes suitable for ¼-20 screws. Length of screw may vary with chassis height.



Typical circuit showing voltage stabilizers and filter components.

EFFECT OF INPUT VOLTAGE VARIATION

D-c power supplies can be designed for various input voltages and ranges. With all other variables constant, the output voltage will not vary more than ±1 percent for a change in input voltage over the rated range of 97 to 130 volts input.

EFFECT OF TEMPERATURE CHANGE

For every 40C change in the ambient temperature, the output voltage level will change approximately one percent.

EFFECT OF FREQUENCY

A change of one percent in frequency will change output voltage level approximately one and one-half percent.

ISOLATION

All d-c power supplies provide electrical isolation between the a-c power source and the d-c load.

POLARITY

G-E d-c power supplies can be designed with the polarity you require. All standard units listed can be installed with either plus or minus grounded.

RIPPLE

Ripple levels of one percent RMS meet most requirements. However, other levels of ripple content can be designed into G-E power supplies.

EFFICIENCY

Efficiency ranges from 70 to 85 percent for normal output voltage levels. For unusually low output voltages or low power ratings, some decrease in efficiency may occur.

REGULATION

Load regulation characteristics depend on the rated output voltage and rated power level of the power supply.

volt-pac® VOLTAGE REGULATORS

ELECTRONIC INNOVATIONS IN ACTION

- **New solid-state control**
- **Precise output voltage control**
- **Fast voltage-correction rate**
- **Cabinet or rack-mounted models**
- **Magnetic circuit-breaker protection**

General Electric's new automatic voltage regulator line provides closely regulated output voltages from varying input voltages. They normally include a motor-operated Volt-Pac variable transformer, associated buck-boost transformers which handle a wide range of input-voltage variation, and a new solid-state SCR control.

These automatic regulators maintain a preselected output voltage level within 1 percent bandwidth, and are temperature compensated from −20 to +40C. They can be bench or floor mounted, or in smaller sizes, mounted in standard relay racks.

* 208-volt nominal output voltage operation requires no change in power connection, but does require selecting correct control transformer ratio. When operated at a nominal 208 volts output, the regulator will correct for an input range of 181 to 236 volts, with the output voltage adjustable from 199 to 217 volts.

† The specified input voltage range is applicable for nominal output voltage. When operating at any other output voltage within specified range, the input voltage range will change proportionately with the change in output voltage level selected.

‡ Load kva based on nominal output voltage.

No Waveform Distortion

No harmonic waveform distortion is introduced at any load or with any input voltage. The output voltage waveform is a precise reproduction of applied input waveform.

Adjustable Output Voltage

Output voltage for units nominally rated 115 volts is adjustable from 110 to 120 volts. Output voltage also is adjustable from 220 to 240 volts for units rated 230 volts; from 440 to 480 volts for nominally ratetd units of 460 volts. Please note that the specified input-voltage range is applicable for nominal output voltage. When operating at any other output voltage within specified range, the input voltage range shifts in proportion with the selected output voltage.

Accurate Static-sensing Control

Solid-state control combined with the new Sylvan-Kettler static-sensing device achieve the optimum in automatic accuracy. The voltage regulator is governed automatically by a dead-band-type voltage-sensitive control utilizing either lamp or zener bridges. The circuit includes magnetic input circuit breakers and an output voltmeter.

MERCURY DURACELL★ BATTERIES

Mercury batteries offer more power per unit of volume than any other type. They are available in a very wide range of sizes, voltages and shapes. Voltage stability is excellent throughout operating life. "R" types rated 1.35 volts per cell, "non-R" at 1.4 V. Mercury batteries cost less per listening hour than ordinary zinc-carbon types. Alkaline batteries are "Best Buy" for lighting and photoflash. Zinc-carbon types are used where low price is more important than long-life economy. Mercury batteries listed below have flat terminals unless otherwise noted. Types with T suffix have solder tabs.

HIGH VOLTAGE POWER PACKS

COMPACT "M" SERIES 2 TO 75 KVDC

The "M" series Power Packs are a completely new design. Long life and a small package directed the use of the latest techniques and advanced materials. Many features have been incorporated with the highest quality materials, at the same time maintaining economy of cost.

Standard input voltage is 118 at frequencies from 50 to 500 cycles per second inclusive. Available also are input voltages of 220, 230 and 240 volts from 50 to 500 cycles per second inclusive. For 220 volts suffix the desired part number with "X", 230 volts "Y" and 240 Volts "Z". All units may be modified for other input voltages.

The output is filtered DC and standard potentials and current ratings are listed below. All units can be modified for any required potential and current below the values specified in the listing. The output potential can be varied from zero to the rated voltage and load by means of a variable auto transformer at the primary.

Ripple is 1% RMS or 2.75% peak to peak at rated current and voltage.

Design life is 40,000 hours at 35°C and 5,000 hours at 85°C.

Case finish is light blue gray lacquer per MIL-L-7178.

All units except the 75 KV, have two output terminals isolated from the container, permitting either terminal to be operated at ground or an intermediate point between them can be tied to ground. The 75 KV unit has a single high voltage terminal for the output. The Power Pack is normally furnished to deliver a positive output potential relative to ground. If a negative output is desired it can be shipped as such from the factory upon request. The polarity can be easily reversed as required by opening the top access port and reversing the selenium rectifier board. The remaining output terminal at low potential is left ungrounded so that the lead current be monitored if required.

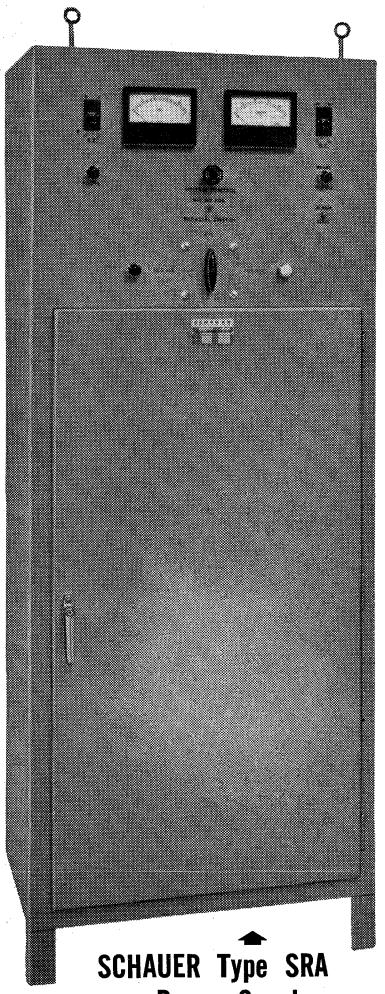
SCHAUER POWER SUPPLIES

New in design and applied engineering technology are Schauer standard and custom-engineered power supplies for communication, industrial and laboratory use. Among a wide range of types are fully transistorized series regulated and magnetic amplifier regulated, output regulated and non-regulated units. Illustrated here are but a few of the types and designs that are available.

Special features that can be incorporated include alarm circuits, current limiting circuit, bus switching, etc. All units are built of quality components, conservatively rated and completely wired for maximum reliability under continuous duty conditions.

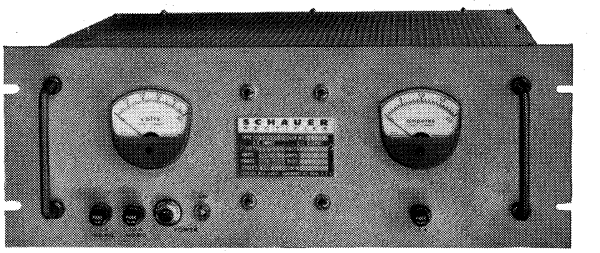
Your power supply problems can be readily solved by consulting with Schauer — manufacturers of quality products since 1907. Ask your distributor for Schauer Catalog No. 640.



SCHAUER Type SRA Power Supply

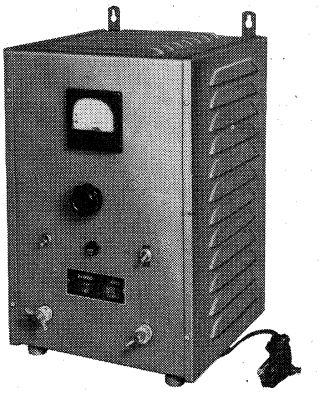
Magnetic amplifier regulated input and output with alarm circuit and provisions for switching to either positive or negative bus of a 3-wire D.C. system. Regulation is maintained within 1% total band for load variations from no load to 125% of full load and for input voltage variations of ± 10%. Available in capacities from 10 through 250 amperes in 48, 60 and 125 volt models for 3 phase, 60 cycle input lines at standard commercial voltages.

SCHAUER Type TRPS Power Supply



Transistorized regulated power supply for relay rack mounting, providing exceptionally close output regulation. Can be supplied in capacities up to 25 amperes maximum at voltage ratings up to 125 volts D.C. and in a variety of packaging and mounting arrangements.

SCHAUER Type SA48006 Power Supply



For operating and testing AM and FM 2-way and marine radios. Provides maximum 48 amperes at 6 volts D.C. or 24 amperes at 12 volts D.C. by switching. Output adjustable by multiple tap switch. The ventilated steel case for bench or wall mounting is 10″ wide x 9½″ deep x 15″ high.

SCHAUER Type SK Power Supply

General purpose power supplies for applications where close output regulation and a highly filtered D.C. supply are not required. Bench, wall and floor mountings and many variations in output and characteristics are possible.

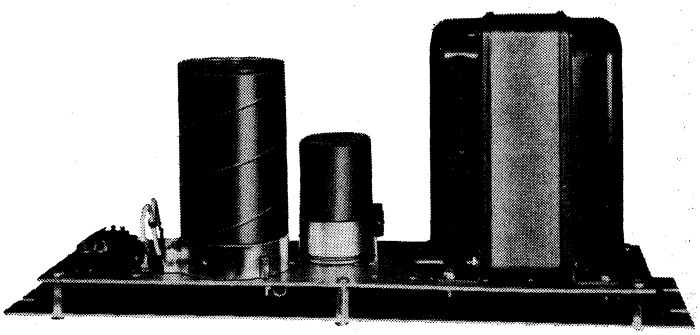
Sola CVDC Power Supplies

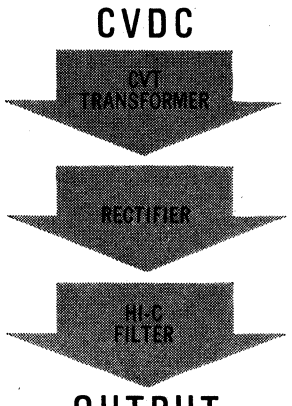
FAST, RELIABLE VOLTAGE REGULATION FROM A LOW-COST SOURCE

CVDC circuitry is so trim and simple that it can offer the utmost in performance and reliability. The constant-voltage transformer (originated by Sola) offers inherent current-limiting action that allows utilization of efficient, economical semiconductor rectifiers with low forward voltage drop. CVDC has these specific advantages:



Constant-voltage Sola transformer provides ±1% regulation for line-voltage variations as great as ±15%, serves as the heart of CVDC power supplies for voltage-sensitive equipment.

1. Fast, dependable line-voltage regulation: within ± 1% for fluctuations of ± 15%; voltage will return to regulation envelope in approximately 50 milliseconds.
2. Load regulation: from ½% to 8%, one half to full load.
3. Automatic current limiting: short circuit protection; withstands load faults; high overloads cannot damage power supply or equipment components.
4. High efficiency: upwards of 75%; low input-power requirements.
5. Simplified operation: no adjustments or maintenance; continuous duty.
6. Convection cooling.
7. Ripple: 1% rms maximum.
8. Ambient operating temperature: 40° C maximum.



Fixed output for fixed, intermittent, variable, or pulse loads.
All inputs 100-130 volts, 60 cps.

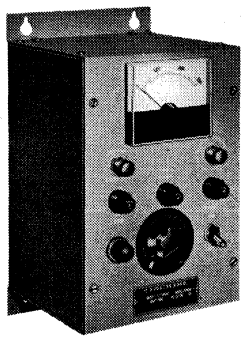
STABILINE®
FULL RANGE REGULATOR CONTROLLERS



TYPE FR500MP

For use with any motor-driven POWERSTAT® Variable Transformer to provide full range:

1
REGULATED AC VOLTAGE

—Regulates output voltage from any motor-driven 120 or 240 volt 50/60 cycle, single phase POWERSTAT Variable Transformer. For three phase, the unit monitors one line-to-neutral or one line-to-line voltage. Can be used for 480 volt duty by using step-down transformer. Output voltage remains within a 2-volt band on 120 volts and within 4-volt band on 240 volts.

2
REGULATED AC CURRENT

—Combined with POWERSTAT Variable Transformer, current/voltage transformer and current transformer, the unit will maintain constant output current accurate within ±1% of the maximum current setting.

3
REGULATED DC VOLTAGE—

Combined with a POWERSTAT Variable Transformer and a user-supplied d-c power supply, the unit provides regulated d-c voltage. Can be supplied for d-c use or can be modified by user.

IRC No. DT-2

- 300 pages of useful transistor information
- Interchangeability guide for more than 5000 types—including foreign makes
- Transistor theory
- Circuits & circuit descriptions
- Transistor indexing by parameters
- Price information
- Transistor testing and handling procedures

The second edition contains theory, circuit, and data sections on field-effect transistors.

DATADEX SYSTEM OF TRANSISTOR IDENTIFICATION BY PARAMETERS The Datadex identification system helps the user locate a semiconductor device for a particular application without having to search a myriad of manufacturers' specification sheets to find the right type number. Datadex includes a complete index of identification numbers which describe transistor characteristics by indicating the type and number of junctions, the maximum power, voltage, and frequency cutoff ratings. An interchangeability guide lists corresponding JEDEC type numbers.

EXAMPLE: Datadex number 2N32E4

2	N	32	E	4
NUMBER OF JUNCTIONS (2=TRANSISTOR)			COLLECTOR TO EMITTER VOLTAGE (E=10.0 TO 19.99 V)	

TYPE OF JUNCTION (N=NPN)

POWER DISSIPATION ($P_C > 3 \times 10^2$)

CUTOFF FREQUENCY (f_{hfb}=104kc)

MINIATURE TIME-DELAY RELAYS adjustable up to 200 seconds

Bourns TRIMPOT® time-delay relays have integral adjustment from 0.1 to 1.5 seconds. Addition of an external resistor or resistor-capacitor combination can increase adjustability to 200 seconds. Units are protected against accidental polarity reversal and against transients up to 200% of line voltage. All models have welded circuitry and are vacuum-potted. MIL-Spec models have repeatable accuracy of ±5% max.

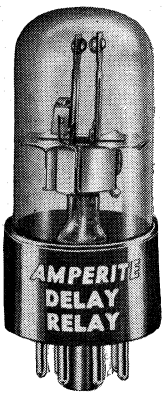
THERMOSTATIC **AMPERITE** DELAY RELAYS

GLASS ENCLOSED • HERMETICALLY SEALED • A.C., D.C., OR PULSATING CURRENT



STANDARD

AMPERITE THERMOSTATIC DELAY RELAYS

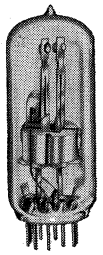
Amperite Thermostatic Delay Relays are manufactured on automatic high production equipment — resulting in a low price — and top quality. Quality is not sacrificed at any point. For example, although contacts are rated at 3 amps, 10 amp contacts are actually used. Similarly with all other parts—only the best available are used.

Amperite Thermostatic Delay Relays are actuated by a heater . . . and therefore can be used on A.C., D.C., or pulsating current. Being hermetically sealed, Amperite Relays are not affected by altitude, moisture, or other atmospheric conditions. REPLACED AS EASILY AS A RADIO TUBE.

CIRCUITS SPST: Available only — normally open or normally closed.

HEATER VOLTAGES AVAILABLE: 2.5, 5.0, 6.3, 12.6, 26, 50, 115V.
For 220V use a 6500 ohm-5 watt resistor in series, with 115V heater.

HEATER WATTAGE: Standard and Miniature Relays—all voltages—2w prox. All heaters may be operated continuously. Heaters will not be damaged by a 50% voltage overload for duration of 1 hour or less.



MINIATURE

VARIATION OF DELAY WITH HEATER VOLTAGE

FIG. 1—Effect of change in heater voltage on delay in seconds. Only low voltage heaters (2.5 to 26 V.) incorporate heater voltage regulations as shown in diagram.

For 22 to 30 V. supply: We recommend Amperite Delay Relays with 26 V. heaters for airplanes and similar power supplies. These heaters are regulated for battery variation of 22 to 30 V. as shown in this diagram.

AMBIENT TEMPERATURES: Relays are compensated for temperatures of −55° to +80°C. (Relays can be operated from −80°C to +125°C without damage). Ambient temperature tolerances depend on type. Low voltage heaters 26V or less have better ambient compensation than relays with 115V heaters. If the relays are actually to be used over ambients of −55°C to +80°C it is advisable to have each relay tested at the factory over the ambient. A nominal charge is made for this service.

CONTACT DROP: — 0.1V — Prox. at 1A.

DELAYS AVAILABLE:—From 2 to 180 seconds. Relays can be used in series to obtain longer delays. The delay of any individual relay up to 120 seconds can be increased up to 25% by using a resistor in series with the heater. Delays above 120 seconds cannot be increased. Relays with short delays such as 2 to 5 seconds can be increased 50%.

LIFE of any individual relay will depend on the service the contacts are subjected to. With a 115V — 2A A.C. non inductive load the contacts will withstand at least 250,000 operations. SHELF LIFE of Amperite Delay Relays is over 10 years.

INDUCTIVE A.C. LOADS: When breaking an inductive A.C. load, use a condenser of .01 to .1 mfd across contacts. In some cases, putting a 20,000 ohm, 5w. resistor across the contacts reduces the arcing considerably.

Relay Contacts should not be used on voltages above 220V.

FOR INSTANTANEOUS RECYCLE AND ELIMINATION OF CHATTER

For instantaneous recycle and elimination of chatter. Cannot be used with Sensitive Relays.

Magnetic Relay requires extra N.O. contact as shown at "E".

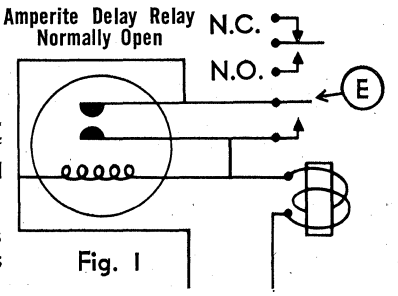

Fig. 1

For instantaneous recycle and elimination of chatter when Sensitive Relay is used.

Magnetic Relay requires an extra SPDT contact as shown at "F".

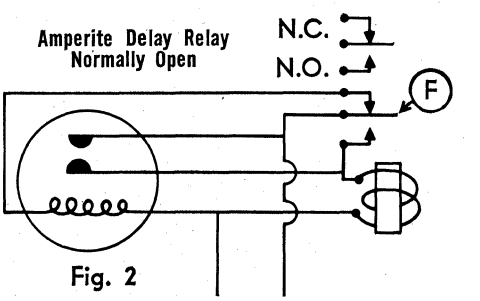

Fig. 2

INSTANTANEOUS RECYCLE: This can be obtained by using a normally open Amperite Delay Relay in conjunction with a Magnetic Relay as shown above. If normally closed is required — use a **normally open** Amperite Delay Relay — and use the NC contacts on the magnetic relay. Choose the Amperite Delay Relay for the voltage required and the delay required (e.g. — 115N030 — would be used on 115 volt supply — for a 30 second delay).

LONG CYCLE RELAYS: are also available. For example, Amperite Delay Relay 115N07T has a delay in closing of 3 to 7 seconds. After heater is disconnected, contacts will remain closed for 30 seconds minimum. Write us about your requirements.

Flashers operate approximately ⅓ on, ⅔ off. The percentage time on can be increased by reducing voltage of heater.

Flashers available only in quantities of 12 or less. Cannot be supplied in production quantities.

Normally closed flashers are standard, and are indicated by the letter "F." The number following letter "F" denotes flashes per minute. *For example a 6F30 flasher,* has 6.3V heater, normally closed 30 FPM with a ± 15 flashes per minute tolerance. A 6F30T, would be the same type but in 9-pin miniature. Flashers are available from *30 to 90 Flashes per minute* with tolerances as shown in the chart below:

FLASHERS have contact rating of ½a 115V AC, non-inductive.

T-BAR Connectors save time and reduce installation costs using individual snap-in crimp terminals crimped to pre-stripped wire and then snapped into a contact block, which forms the connector. The connector is pushed onto the wafer terminals, eliminating soldering. Because we offer a connector, rather than a receptacle, harness work can be completed outside the chassis and therefore no fancy chassis work is required to accept a receptacle. It not only makes the metal work simpler, but it also saves layout engineering and drafting time. Since T-Bar Switch/Relays are so easily mounted, they are often found on the back of meter panels or on their own brackets.

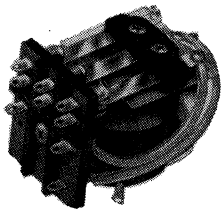
GLOBE RELAYS

MIDGET SERIES

TYPE "W" MIDGET GENERAL PURPOSE



This relay offers high reliability at a minimum cost. The silver cadmium-oxide contacts are mounted on beryllium copper blades.** There is good contact wiping action. This unit operates well in ambient temperatures up to 125° C.

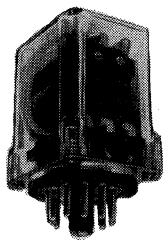
** Fine silver contacts for 5 amp applications.

CONTACTS: 5 amps @ 24 VDC or 115 VAC, 10 amps @ 24 VDC or 115 VAC. Arrangement 1, 2 or 3 PDT.

COIL: D-C applications up thru 120 VDC, A-C applications up thru 230 VAC.

MOUNTING: One 6-32 screw and keying boss to prevent turning.

TYPE "WC" MIDGET GENERAL PURPOSE WITH DUSTITE ENCLOSURE



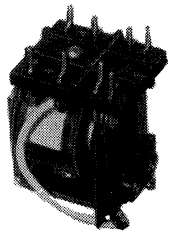
Relay is identical to type "W." However, the unit provides a clear dust-proof polystyrine case on Octal type plug-in base. Operating temperatures up to 85° C ambient. Variation of base or a hermetically sealed can, can be provided on request. This unit comes in standard Globe wiring. For special wiring to meet existing installations specify "WZ" wiring.

CONTACTS: 5 amps @ 24 VDC or 115 VAC, 10 amps @ 24 VDC or 115 VAC. Arrangement 1, 2 or 3 PDT.

COIL: D-C applications up thru 120 VDC, A-C applications up thru 230 VAC.

MOUNTING: Octal plug-in.

TYPE "WP" MIDGET PRINTED CIRCUIT



Relay is identical to the "W" type using the same integrally moulded parts. The terminals are designed for direct mounting into printed circuit boards. They will fit into .050 inch diameter holes and project 1/32 inch beyond an 1/8 inch thick circuit board. Base plate area on the board is only 1.070 x .890 inches. Dimensional artwork for hole configuration is available.

CONTACTS: 5 amps @ 24 VDC or 115 VAC, 10 amps @ 24 VDC or 115 VAC. Arrangement 1, 2 or 3 PDT.

Solenoids available in both intermittent and continuous duty types. Intermittent types should not be energized for more than 5 consecutive minutes, or be permitted to rise more than 85° C. above 24° C. ambient, without giving sufficient time to cool between operation cycles. Continuous duty types are designed so they will not rise more than 85° C. above the 24° C. ambient temperature when operated at rated load. Plunger has slotted end with ⅛" diameter hole for coupling.

When Ordering give the following information: (1) Solenoid Number; (2) Operating voltages and AC or DC current; (3) Continuous or intermittent duty (if intermittent, give the cycle of operation, length of time current will be passed through the coil, and any other pertinent information); (4) Maximum stroke and maximum pull required.

Pull Data listed in this bulletin obtained during "cold" operation.

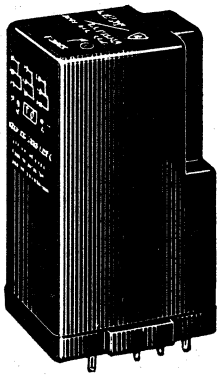
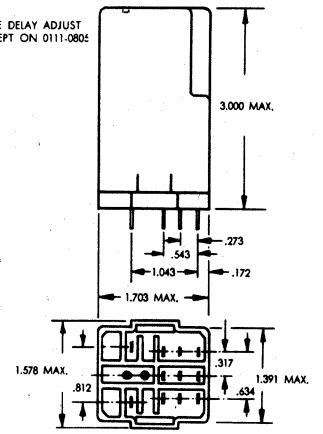
TIME DELAY RELAYS

SERIES TD





This is the most accurate and compact solid-state time-delay available commercially from stock. 3PDT contacts handle up to 10 amp resistive load. Six standard model relays for 24V., DC and 115V., AC 50/60 cycles provide delays from 1 to 180 seconds. All units utilize silicon semi-conductors and precision tantalum capacitors for reliability. 15-turn screw-type potentiometer furnishes high resolution and accuracy. Accurate to 5% of a nominal setting over its complete temperature and voltage range. Repeatability is 2% after a line interruption of 50 milliseconds. Termination can be quick disconnects, socket or solder connections. Size: 3"x1⅝"x1¹⁵⁄₁₆". Shpg. wt., 5 oz.

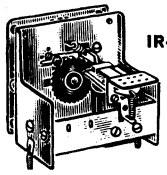
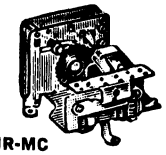
STEPPING CONTROLS—For accurate sequence selecting, pulse multiplying, pulse dividing, circuit selecting, automatic homing, remote homing, counting and latching. Guardian steppers are specified for automatic control of electrically operated business machines, accumulators (coin and other), animated displays, electrical scoreboards, automatic overhead garage doors, assembly line controls, automatic packaging (loading) controls, sump pump controls, commercial slide projectors, among others. All Guardian steppers are **intermittent duty** direct-drive units with switching operations completed upon energization.

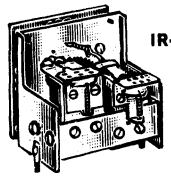




CONTINUOUS ROTATION

The circuit selection wiper on Continuous Rotation Steppers moves in one direction only, upon energization of the step coil. This type of stepper is available in standard 24 point (MC) or 40 point (PC). The Guardian MC Midget Continuous Rotation Stepper is particularly adaptable to repetitive sequence functions. The 24 bridging contact deck is evenly divisible by eight possible sequences. The PC stepper features self-stepping speeds up to 30 steps per second and mechanical life expectancy of over 4,000,000 steps.

All stepper contact points are rated 1½ amps resistive, at 115 V., 60 cps. Coil* Voltages are 115V., AC, 24 DC 60 cps.

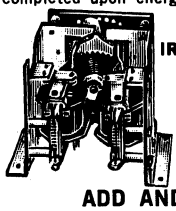


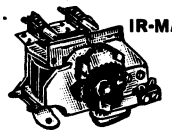
ELECTRICAL RESET

The circuit selecting wiper on Electrical Reset Steppers can be reset to zero or home from any desired position, by energization of the reset magnet. They are frequently employed to record counts by various numerical groups, then resetting automatically.

Type M.E.R. A direct drive (steps on energization) with positive mechanical reset interlock actuated by the reset magnet and unlocked on the first energization of the step magnet. Assures positive reset on as short a pulse as one-hundreth of a second. By interconnecting two or more Steppers, count can be increased to any desired total counting by tens, or any convenient multiple. Will control a sequence of operation and then automatically reset to starting position.

Type P.E.R. Operation same as M.E.R. but with up to 36 active contacts.





ADD AND SUBTRACT

Add and subtract steppers are basically continuous rotation types with the added feature of being able to reserve the movement of the selecting wiper when required.

Type IR-MAS A midget add and subtract stepper incorporating a cam actuated switch which operates at zero position. Used primarily to indicate a zero balance between pulses supplied to the "add" coil as compared to pulses received by the "subtract" coil.

Type IR-RAS These are bi-directional steppers whereby the selector wiper moves in either direction depending on which of the coils are energized. The RAS is frequently used as a drive control for potentiometers or variable transformers.

GENERAL PURPOSE RELAYS

MINIATURE PLUG-IN *LOW PROFILE LOW COST*

(SERIES MKTR)

Despite its compact size this new totally enclosed, low cost, low profile miniature relay has not compromised the high quality of its progenitor the Series MK open relay. The low mounting profile (dust cover included) has been made possible by incorporating the frame of the relay with the connector-header. Thus a certain basic hardware has been eliminated resulting in important size reduction. Versatility is also assured since the standard terminals can be used with Amp snap-on connectors, printed circuits, or plug-in receptacles. Also available with studs for chassis mounting. Termination can be used for soldered connections. The plug-in-receptacle is true 10 ampere construction. Lugs can be used for either solder or snap-on connections.

Type SK
Type SKA

Type SKT

This entire series of SK type relays is identical in construction to our MK series miniature relays, with one essential difference —the special alloy used in pole and frame increases the magnetic flux many times thus making the relays very sensitive to very low power levels—only 60 milliwatts per pole.

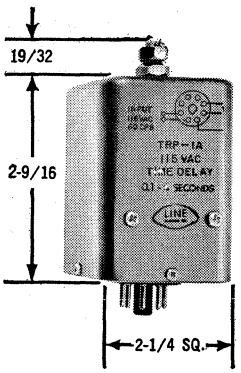
TIME DELAY RELAYS



PLUG-IN TYPE (SERIES TRP)

The series TRP Time Delay Relay provides a pre-set delay between the closing of one set of contacts and the subsequent operation of a set of SPDT load contacts.

The series TRP initiates from a sustained switch closure to L1 and L2. The unit resets instantaneously when this circuit is opened; ready for another timing operation.

The series TRP is available in two operational options:

Type "A"—If sustained closure is interrupted during time cycle, unit will not reset. When closure is again made, timing will continue to give originally selected time delay.

Type "B"—If sustained closure is interrupted during time cycle, unit will instantaneously reset.

REED RELAYS — 3 STANDARD TYPES

In computer, data processing and guidance system development, design engineers are enthusiastically applying dry reed relays in place of switching diodes. The reasons: miniature profile—life expectancy exceeding 100,000,000 operations—less heat generated compared with switching diodes—3 millisecond operating time and very high resistance in the open contact stage.

To efficiently serve the growing demand for dry reed relays in these and other applications, Line Electric now stocks these 3 standard types for immediate delivery in prototype quantities.

Micro-Miniature Rotary Relays

MAGNECRAFT Class 44 Rotary Relays have been developed to provide increased reliability in the crystal can size. Here are a few of many areas in which improvement has been made:

1. Frame and header assembly of rugged bridge-type construction—assures greatly increased resistance to distortion from shock, vibration and temperature—to military specifications.
2. Balanced armature—minimizes the effect of gravity, shock and vibration on operating reliability.
3. Hinge design—oversize, instrument type bearings at BOTH ends.
   a. Minimizes friction for increased sensitivity and greater contact pressure.
   b. Increases operating reliability and life.
4. The finest development in high temperature insulation.
5. Hermetically sealed in inert gas for maximum protection against severe ambient conditions.

Contact combination: Double Pole, Double Throw
Contact rating: 2 amperes at 28 VDC or 115 VAC, non-inductive.
Operate Time: 5 milliseconds maximum with nominal voltage.
Release Time: 5 milliseconds maximum.

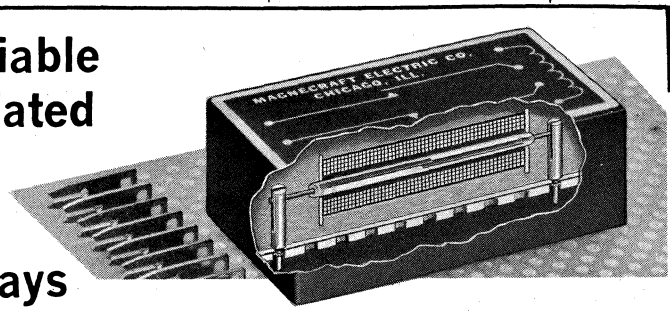
Ultra-Reliable Encapsulated Printed Circuit Reed Relays



1. Reed contact leads are soldered stress-free to rugged terminal posts.
2. Terminal posts extend through the terminal board as printed circuit pins.
3. The complete assembly is encapsulated, which provides:

a. Mechanical protection for the glass capsule, contact leads and coil.
b. Full protection against tampering and contaminating atmosphere.
c. Rigid positioning of terminal supports and printed circuit pins; stresses on circuit pins cannot transmit to the reed contact leads and affect relay adjustment.

The package illustrated is a Class 102PC, DPST-NO Standard Size Relay (page 7) cut away to show typical assembly of one reed.

Construction of miniature encapsulated printed circuit reed relays (pages 5 and 6) is similar to the standard size.

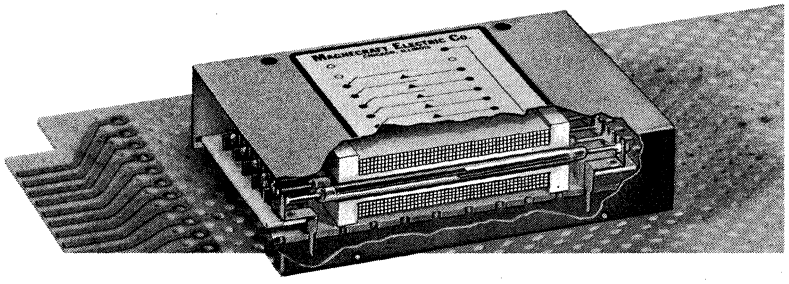
MPC—The Low Profile Printed Circuit Reed Relay Package that combines High Reliability and Low Cost



1. Reed Relay contacts are hermetically sealed with inert gas in glass capsule; completely protected from contamination and tampering.

2. Contact leads are soldered (or welded) stress-free to rigidly positioned terminal supports.

3. The combination circuit board pins and terminal supports are securely fastened to terminal board; stresses on circuit board pins cannot transmit to contact leads and affect relay adjustment.

4. Integrally molded Nylon bobbin and mounting base combine electrical insulation and mechanical protection for the glass capsule.

5. Snap-on steel cover adds mechanical protection and magnetic shielding.

The package illustrated is a Class 102MPC 6PST-NO Standard Size Relay (page 7) cut away to show typical assembly of one reed.

Construction of miniature MPC packages (pages 5 and 6) and sub-miniature MPC packages (page 9) is similar in principle to the standard size MPC package illustrated.

Includes Indicator, Plate, Thyratron and Latching Versions in Unenclosed and Enclosed Types

Simple, rugged, low cost relays handling substantial power for small size. Uncomplicated design provides unusual flexibility for making and changing connections and mounting. Stock includes relays in versatile enclosures, some with indicator light, also plate, thyratron and latching versions. Wide commercial and industrial use where economy and versatility are important.

Basic (Unenclosed) Relay: All connections terminate on barrier-type terminal panel on combination solder—quick-connect (push-on) lugs which accept AMP 110 female connectors. The terminal panel is conveniently incorporated into printed circuit boards. Fixed contacts are integral inlay on terminal itself. Normally furnished with a 6-32 x ½" mounting stud and non-turn boss (or lug for 4-pole relays). A 6-32 threaded hole is optional. Unenclosed relays can also be mounted by plugging their panels into Ohmite SOGPR sockets. See "Socket" following.

Contact Ratings: Two ratings—fine silver contacts, 5 amps at 115 VAC or 32 VDC; silver-cadmium contacts, 10 amps.

Insulation: Tested at 1500 VAC.

Coil Wattage: 1.4 watts DC operation; 160 watts (2.0 volt-amps) AC except 2.4 watts (3.70 volt-amps) for 4-pole AC and AC latching relays.

ENCLOSED RELAYS (GPRTA-, GPRTT-, GPRTS-, GPRTP-). Four types of clear plastic enclosures as follows:

Chassis Mounting Types: "GPRTA"—("Terminals-Above-Chassis" type) has terminal panel opposite to mounting flange; "GPRTT"—("Terminals-Through-Chassis" type) has terminal panel on same end as mounting flange, requires chassis cutout; "GPRTS" type (Terminals for Socket Use) is similar to GPRTT but has no mounting flanges. It is intended strictly for plug-in mounting in Ohmite socket "SOGPR" (see "Socket" below).

Plug Base Type: "GPRTP"—employs octal plug for 1 and 2 pole relays; 11-pin plug for 3-pole. The octal plug base is integral with relay for rigidity—is designed with recessed pins which meet UL spacing requirements (150V).

‡4-Pole GPRTS relays are not covered by CSA.

†GPRTA and GPRTT types as listed by UL, differ slightly from the stock versions above and consequently, are made to order. These UL versions have a "U" added to the catalog number, such as in "GPRTAU." They also have CSA approval.

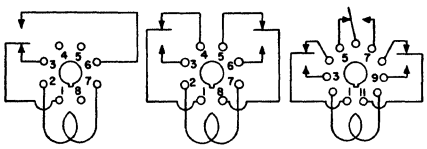
MODEL GPR GENERAL PURPOSE RELAYS

Socket (SOGPR): Unique socket fits the terminal panels of all GPR relays and provides over-the-surface spacing to meet UL requirements for 150 volts. Requires chassis cut-out to mount. Hold down springs (see illustration) for unenclosed and enclosed relays, are provided with each socket but are not required except under conditions of vibration or shock. Socket solder terminals will also accept AMP 110 quick-connectors. See socket listings.

Indicator Relay: Incorporates light bulb to indicate energized condition of coil. Stocked only in GPRTP enclosures described in preceding. Neon bulb furnished with coil ratings 70 volts and above; incandescent bulbs for coil ratings below 70 volts.

Plate Relays: Feature same physical construction as standard general purpose relays but are adjusted for greater sensitivity and can be used as electronic circuit controls, i.e., in the plate circuits of standard vacuum tubes.

Thyratron Plate Relay: Designed specifically for plate circuit of thyratron tubes 2050 and 2D21 with 115 VAC supply (see diagram). Also suitable for operation in series with silicon controlled rectifiers from a 115 VAC supply. Ready to work, no capacitors or adjustments required, no chatter. Available unenclosed and in most GPR enclosures.



Plug wiring schemes for plug base (GPRTP) relays

Latching Relay: Consists of two GPR relays with armatures linked so that the n.o. contacts of one are mechanically latched in closed position when, and after, this relay is energized. When 2nd relay is energized, first relay restores and latches 2nd. Permits switching of twice the number of circuits and holding without coil current. Unenclosed type "GPRLE". Enclosed type "GPRLETP" in clear plastic case with Jones plug P-324-SB fitting S-324-AB socket.

UL & CSA Approval: Column heads in the stock tables carry the UL (Underwriters' Laboratories) or CSA symbol (Canadian Standards Association) where applicable. The grey tint in the column indicates the relays are recognized under the "UL components program". The acceptability of such relays by UL depends upon their combination with other equipment such as sockets etc.

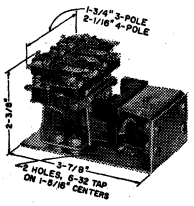
MODEL DO LATCHING RELAY (DOLEX-)



Consists of Model DO relay and a "reset magnet" with both armatures mechanically latched so that the normally open contacts of the relay remain closed when the relay energizing voltage is removed. The relay releases to normal position when the reset coil is pulsed. Permits "holding" of circuits without continuous coil current. Coils of stock units (both relays and reset coils) are 115VAC. Available with 3 or 4-pole relays. **Weights:** 3-pole—16.5 oz.; 4-pole —17 oz.

MODEL DOSY RELAY

FOR PLATE CIRCUIT OPERATION

The high operating sensitivity makes the DOSY relay adaptable to a wide range of electronic control circuits, such as plate circuit controls, etc.

The insulation is of high grade, molded phenolic material. At 115 v. AC or 32 v. DC, resistive load, Model DOSY relay has a contact rating of 15 amperes.

There are two DPDT types, one having 10,000 ohms coil resistance (maximum pull-in current of 8 ma. DC); the other having 5,000 ohms coil resistance. Dimensions are same as for Model DOS next column.

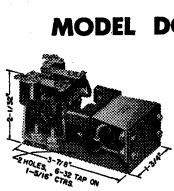
MODEL DOS LATCHING RELAY (DOSLEX-)



DOSLEX-1T

Consists of Model DOS relay and a "reset magnet" with both armatures mechanically latched so that the normally open contacts of the relay remain closed when the relay energizing voltage is removed. The relay releases to normal position when the reset coil is pulsed. Permits "holding" of circuits without continuous coil current. Coils of stock units (both relay and reset magnet) are 115VAC. **Weight:** 14.2 oz.

*Magnet coils designed for continuous duty. Do not operate at rate higher than indicated under Mechanical Life.

**Based on steady state test under laboratory environmental conditions. Consult factory if application involves unusual load, speed of operation, off-on ratio, environmental or operating conditions. Electric life substantially greater when operated below rated load.

†Load tests—making inrush ratings (0.4 to 0.5 P.F.)—breaking 125% continuous rating (0.65 to 0.8 P.F.).

TYPE 33B Designed and constructed with a variety of features which contribute to the sensitivity and longevity of this relay. Contacts and terminals are mounted on molded phenolic blocks with integral barriers. Moveable contact blades are made of spring temper phosphor bronze for high conductivity and long life. Adjusting screws on each blade permit close adjustment in the factory for contact gap, over-travel, and pressure. Armature pivots on machined phosphor bronze bearing pins and pivot holes are precision reamed. Adjustment of the armature and yoke assembly allows proper alignment between the armature and pole face. Four 6-32 N. C. tapped mounting holes in the base allow easy mounting on chassis or bracket.

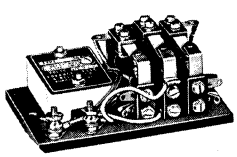
TIME DELAY • SENSITIVE • HIGH VOLTAGE RELAYS



TYPES DB & DM With their adjustable time-delay range, these relays excellent for use in preheating tube-filaments; for specialized lighting circuits, photographic controls, protection applications, etc. DB provides time-delay before break. DM provides delay before make. Both series utilize bi-metal thermal units which can be adjusted for delays from 5 to 60 seconds. Cooling of the thermal units for proper re-cycling requires 8 to 10 times the delay period.

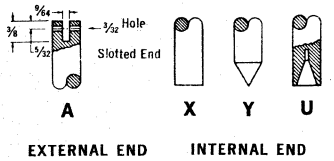
STANDARD PLUNGER STYLES AVAILABLE



TYPES 38, 39, 40, 41, 42, 51 Solid frame solenoids using high-grade steel in all parts of the magnetic circuit. Carefully controlled annealing, after all machining operations are completed, assures maximum efficiency. The frame is dovetailed and staked to the end plate, adding mechanical strength and increasing the performance of the magnetic circuit. Plungers and plunger stops, which are made of annealed and specially processed steel, are available in three standard types for specific operating requirements. Type 51 is a laminated frame solenoid and has been designed and engineered to meet all of the requirements of the highest quality A. C. solenoid. Special production techniques and rigid quality control combine to provide a highly efficient unit. The frame is composed of silicon steel laminations securely riveted to a steel frame. Pole faces are precision ground and equipped with copper shading rings. Silicon steel laminations are also used for the plunger.

Potter & Brumfield Relays

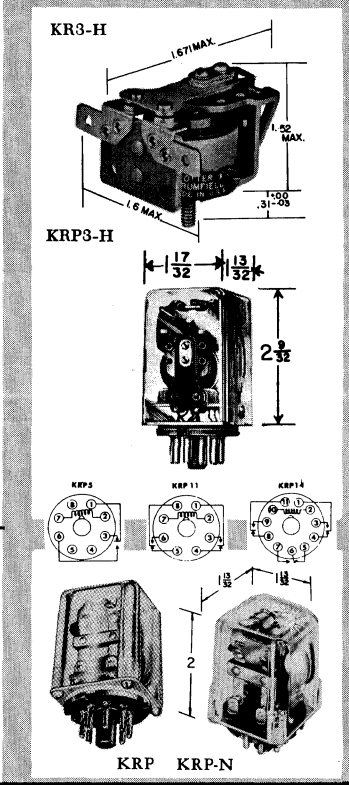
KR3-H SERIES Ruggedly constructed but of small size, the KR3-H is a heavy duty relay especially designed for applications where limited space is a factor. Its heavy duty copper alloy movable contact carrier has twin ¼" dia. silver-cadmium-oxide contacts rated 20 amps @ 120V AC 60 Hz resistive, or 28V DC; 1 HP 120/240V 60 Hz. Contact arrangement is 1 Form X (SPST-NO-DB) only. Terminals: suitable for ¼" quick connect, also solder, for contacts; solder only for coil. Size: 1.6" x 1.671" x 1.52". Seated height: 1.21". Mounting: One 6-32 stud on .437" center. Weight: 2 ozs.

KRP3-H SERIES All electrical specifications listed above for the KR3-H series relays apply to the KRP3-H. However, the KRP3-H is enclosed in a clear, high impact plastic dust cover and features an octal plug-in base. Weight: Approximately 3 ozs.

KRP SERIES Versatile, multi-contact arrangement. Enclosed in a clear high impact plastic dust cover. Standard 8-pin octal-type plug for KRP5 and KRP11, 11-pin for KRP14. Weight: Approx. 3 ozs. Contacts: 5 amp, 3/16" dia. gold-flashed silver. 10 amp 3/16" dia. silver cadmium-oxide. See KCP-KRP hold down spring for special mounting applications. See KRP-N indicator lamp relay for current monitoring applications.

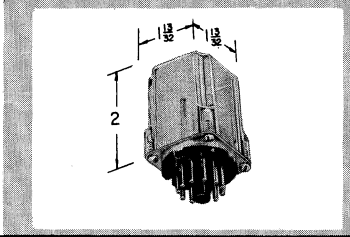


KRP-N INDICATOR LAMP RELAY

A general purpose relay incorporating a lamp to indicate current or voltage availability in power circuit. Contacts: 3/16" dia. silver cadmium-oxide. Enclosure: Clear, high impact plastic dust cover. Mounting: Standard octal plug. Weight: Approx. 3 ozs. See KCP-KRP Hold Down Spring for special mountings.

"P"— CASE A clear high impact plastic case for mounting rectifiers, capacitors, resistors or a combination of these. Available with octal-type plug with 8 or 11-pins. Comes complete with four screws. Weight: .5 ozs. each. See KCP-KRP Hold Down Spring for special mounting applications.

35DO70 Case (8-pin plug) NET $ .60
35DO72 Case (11-pin plug) NET $ .75



KCP-KRP HOLD DOWN SPRING

Designed to insure secure mounting of relay in any position. Fits all KCP or KRP plug-in relays. Durable stainless steel spring can be moved aside for relay removal or installation. Mounting: Two 5/32" dia. holes on 1 5/16" centers; will accommodate machine screws or rivets. Available in quantities of 50 per box. Weight: 3 ozs. per box.

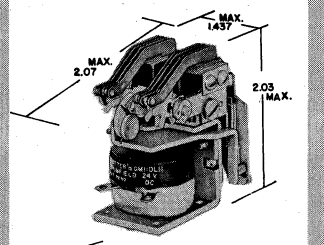
GM SERIES

Unusually versatile switching makes this impulse/sequencing relay especially suitable for single coil latching. The 2 Form C contact arrangement is switched alternately by cam action during drop-out of the armature. It can also be furnished with additional 2 Form C auxiliary contacts (designated by "L"). AC version operates on a 50% coil duty cycle (5 Min. max.). Mounting: 8-32 tapped core with locating boss. Weights: With aux. contacts 4¾ ozs. Without aux. contacts 4 ozs.



The GM1N10 and GM1N12 AC or DC use the basic GM structure with uni-directional printed circuit boards with 10 or 12-steps, respectively. The board is attached to an extension of the ratchet shaft. The movable contact arm advances one position each time the armature *drops out*. Contact rating: .25 amps. Contact arrangement: SP-10 pos. and SP-12 pos. Size: 2.312" x 1.875" x 2".

NATIONAL ASSOCIATION OF RELAY MANUFACTURERS

JR Series Dry Reed Relays

Fast response, reliable performance, small size and long life, together with high sensitivity recommend Potter & Brumfield JR Series dry reed relays for data processing, computer equipment, logic circuitry and various other sophisticated control circuits.

TWO TYPES OF CAPSULES

Dry reed glass capsules with two types of contact arrangements, Form A (SPST-NO) or Form C (SPDT) are available. When biased with a permanent magnet Form A is

Form A

changed to a Form B (SPST-NC): This arrangement requires that coil polarity be observed; it uses a two-cavity bobbin. By combining one Form A with one Form B, a single Form C (SPDT) break before make arrangement can be furnished; it uses a three-cavity bobbin.

A true Form C (SPDT) uses a reed switch with two stationary and one movable contact.

Form C

The movable contact is normally closed until the coil is energized, causing a true Form C (SPDT) break before make; it uses a single-cavity bobbin.

MERCURY-WETTED CONTACT JM SERIES RELAYS

Rare long life, high speed, and unvarying dependability—all are the result of the basic component of these relays: a hermetically sealed glass capsule. It contains the contact arrangement and a small reservoir of mercury sealed in a high pressure hydrogen atmosphere. A film of mercury is renewed for every operation—that's why you can think in terms of billions of operations without contact bounce, pits or welds.

TWO TYPES OF CAPSULES

The capsule used in JMF modules and JML relays has a SPDT, break-before-make (Form C), non-bridging contact arrangement. Each capsule used in JMP, and JM1 to JM4 relays has a SPDT, make-before-break (Form D), bridging contact arrangement. JMF, JML and JMP series achieve a high rate of sensitivity by factory-adjusted magnet biasing.

CONTACT RATINGS

JMF and JML: 500V max., and 2 amps max., 100VA max.*
JMP and JM1 to JM4: 500V max., and 5 amps max., 250 VA max.*

*With contact protection unless in a low level circuit. Details of a simple protection circuit consisting of resistor and capacitor in series are packed with each relay.

SOLID STATE

TIME DELAY RELAYS

AS LOW AS $17.50

NEW

CH SERIES

CH series solid state time delay relays are engineered for a wide range of industrial applications where not-too-critical performance suffices and where economy is a factor. Enclosed in a molded white nylon dust cover, CH time delays are knob-adjustable and equipped with plug-in octal-type terminals. A quality P&B DPDT relay is mounted internally.

CD SERIES GENERAL PURPOSE

A wide selection of operational configurations, all with accurate time delay values, fast reset time and excellent repeatability, are available in the CD series solid state time delay relays. Three modes of timing are available: knob-adjustable, resistor-adjustable and fixed. CD types with delay "on operate" or delay "on release" are listed. Designed for the most sophisticated accuracy requirements.

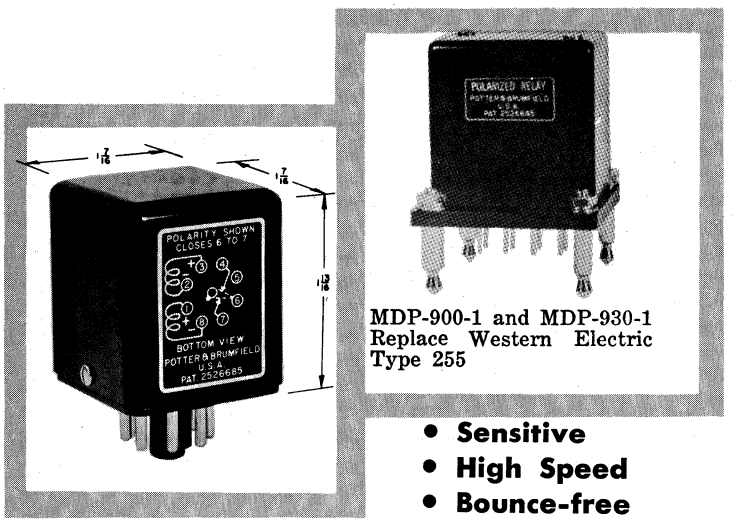
MDP SERIES SMALL POLARIZED RELAYS



MDP-900-1 and MDP-930-1 Replace Western Electric Type 255

- **Sensitive**
- **High Speed**
- **Bounce-free**

For Bi-Stable or Center-Stable Operation

Small size, ultra-sensitivity and high speed switching together with efficient, bounce-free contact action characterize P&B MDP polarized relays. Their operation depends on both the magnitude and direction of the coil current. Two types of contact arrangements provide the following action when the coils are de-energized: *Bi-stable* — armature remains in its last energized position; *Center-stable* — armature remains in center-off position with contacts open. Contact materials as listed. Temperatures: −60°C to +85°C. Measuring only 1 7/16" sq. by 1 13/16" high (seated), MDP relays are equipped with a plastic dust cover and 8 or 12-pin plugs. Weight: 4¼ ozs.

Types MDP-900-1 and MDP-930-1 (with extra long life contacts) will directly replace Western Electric Type 255 relays. 2-11/16" square x 3-3/4" overall height. Weight: 10 ozs.

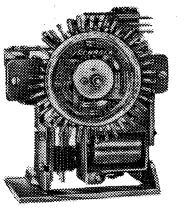
ROTARY STEPPING SWITCH TYPE RT



The SCHRACK Rotary Stepping Switch is a combination of three reliable components:

1. Standard Relay with 1 Form C heavy-duty contact.
2. Ratchet driven Rotary Switch consisting of four banks of twelve or ten points each with sliding bifurcated wipers.
3. Ratchet driven Stepping Relay with two cams which actuate one Form C contact each.

Schrack Rotary Stepping Switches have a highly efficient magnetic circuit and a driving mechanism designed for maximum operating safety. All components are mounted on a rigid die-cast light metal frame and contacts are permanently molded in a sturdy melamine plastic.

ROTARY SWITCH terminals are arranged in a circular pattern with four groups of twelve points each. A conversion can make it operate with 3 groups of 16 each. An alternate version with 4 x 10 points is available for applications requiring decimal counting. Each group occupies a quadrant of the circle and contains a common bus which is connected to the twelve or ten insulated points in sequence by means of a sliding wiper as the switch is operated.

The sliding contacts are bifurcated spring phosphor bronze wipers. The wiper contact assemblies are insulated electrically from each other and the wipers are of the non-bridging type.

The contacts of the rotary switch bank are capable of carrying .5 amps on a steady state basis and of interrupting .1 amps at 110 volts DC with a resistive load or .2 amps at 115 volts AC. Coil Voltages 12, 24, 48 or 110 DC.

TYPE RT 304 — 4 x 12 Contact Points $19.00 ea.
TYPE RT 404 — 4 x 10 Contact Points $19.00 ea.

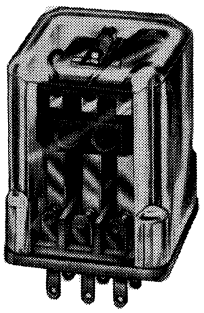
SCHRACK RELAYS



Sockets Available

SINGLE COIL-TYPE CRD MAGNETIC LATCHING RELAY —

This is a bi-stable power relay held in operated position by a strong residual magnetism of the coil core after the coil is de-energized. The coil core is of a special alloy having sufficient remnant magnetic force to hold the armature locked-in for an indefinite period of time after being energized momentarily.

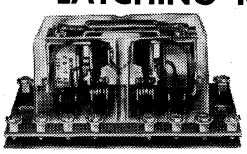
This Schrack relay has only **one** coil winding. In operation this coil is energized by half-wave rectified AC obtained by means of a diode such as Type IN3255 connected in series with the relay coil and mounted in the circuit outside the relay case. For de-magnetizing, to return the armature to its normal position, the same relay coil is energized by full-wave A.C., however, with reduced amplitude obtained by a series-connected resistor. The effect is to destroy the remnant magnetism in the coil core and ready the relay for another pull-in operation.

Although AC operation is recommended, it is possible to operate the Schrack Magnetic Latching Relay with a D.C. pulse using reduced levels and by reversing polarity as shown in technical data sheets.

In design, this magnetic latching relay is identical with the Schrack Type CAD plug-in relay. Contacts are rated at 5 or 10 amps depending on materials used. DPDT (2 form C) or 3 DPDT (3 form C) versions are available.

As can be readily seen, this relay has distinct advantages over the mechanical type since there are no parts subject to wear and friction. Long, trouble-free service and freedom from maintenance may be expected. Since Type CRD is plug-in, chassis may be pre-wired, and its compact design requires less than half the space of the conventional mechanical design. An indefinite "memory" storage and safe programming of complex circuits open up a wide range of potential uses for this most advanced relay design which is being offered at an unusually low commercial price.

LATCHING RELAY — TYPE CBT



A dual coil mechanical latching relay. Each relay operates on a momentary impulse on either coil and is held in the set position until released by an impulse on the other coil. Both coils must be for the same voltage and are continuously rated.

Contact rating: 10 amps. (Based on 600 operations per hour at 115 volts AC 60 cy. resistive load).

May be operated continuously at 1000 cycles per hour.

The CBT relays have a transparent dust cover and a sturdy base plate of insulating material. Screw-type terminals are provided for all contact and coil connections. Available in voltages from 6-230 AC and 6-110 DC.

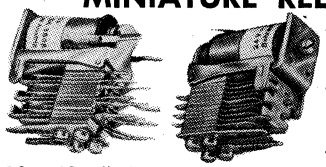
MINIATURE RELAY TYPE RK



A small comb-actuated relay (laminated phenolic blade lifter plate) with remarkably high performance figures in spite of its small dimensions. A well-designed magnetic circuit and ample winding space result in high contact pressure up to 18 grams using low operating power.
The RK Type Relay is available with DC or AC coils (50 to 60 c.p.s.). The standard contact material is fine silver (gold-flashed), with a rating of 3 amps. Special contact materials on request. Coils are vacuum impregnated with high quality electrical varnish.
The SCHRACK Miniature Relay, Type RK, is also available with a clear transparent plastic dust cover, protecting the contact pile-up against contamination and mechanical damage.
Pierced solder lug terminals are standard. Special lugs for printed circuits are available on special order. Maximum contact pile-up 6 C's.

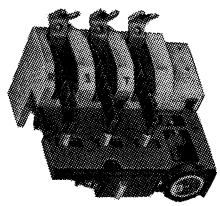
LOW COST PROTECTION AGAINST SINGLE PHASING IN A THREE WAY SYSTEM



Operates by the use of bi-metallic strips and dissimilar coefficients of expansion under temperature changes.
When temperature increases due to overload, a microswitch is activated in any leg of a three phase circuit.
Microswitch is normally placed in series with the solenoid of any switching device in the 3 phase line. Reset button may be manually or automatically operated.

RESISTORS

±1% PRECISION ®CARBOFILM AND ®AEROMET RESISTORS

CARBOFILM PRECISION RESISTORS

Precision deposited carbon resistors designed for circuits calling for the accuracy and stability of wire-wound resistors with the marked economy of carbon resistors. The exclusive Aeroglaze conformal coating offers mechanical protection superior to any other coating eliminating the need for special tubes, sleeves and jackets. Aeroglaze coating will meet all moisture requirements of MIL-R-10509B. Carbofilm resistors offer outstanding stability, low voltage coefficient, low capacitance and inductance in high frequency applications.

CARBOFILM CHARACTERISTICS

TESTING: All Tests conducted in accordance with MIL-R-10509B requirements.

TEMPERATURE COEFFICIENT: Approximately 200 ppm per degree C in the lower resistance ranges and not exceeding 500 ppm per degree C in the highest values specified by MIL-R-10509B.

MOISTURE RESISTANCE: Will meet or surpass the requirements of MIL-R-10509B.

LOAD LIFE: When tested for more than 1,000 hours at full load operation in 40°C ambient temperature, maximum changes are less than 1% with an average change of less than 0.5%.

TEMPERATURE CYCLING: After 5 complete temperature cycles there is an average change of 0.21% with a maximum change of less than 0.5%.

SHORT TIME OVERLOAD: When subjected to 2.5 times the rated working voltage, but not exceeding 2 times the maximum rated voltage for 5 seconds, changes are less than 0.25% with an average change of 0.13%.

LOW TEMPERATURE OPERATION: Maximum changes are less than 1%.

ACCURACY: Guaranteed tolerance of plus/minus 1% at 25°C. (77°F.)

AGING: Due to manufacturing process and control, changes attributed to aging are negligible. The average change in resistance for self-aging is approximately 0.2% per year.

VOLTAGE COEFFICIENT: Does not exceed .002% per volt.

METAL FILM RESISTORS

A superior epoxy coated metal film resistor manufactured under the most exacting quality control standards and specifications assuring excellent performance under the most adverse operating conditions. Units are conformally coated with 100% solid epoxy for added stability under most adverse conditions. Rated for full load operation at 125°C and linearly derated to zero load at 175°C these units meet or exceed all requirements of MIL-R-10509F.

AEROMET CHARACTERISTICS

TESTING: All tests conducted in accordance with MIL-R-10509F requirements.

TEMPERATURE COEFFICIENT: Unites marked characteristic C are +–50PPM, those marked E are +–25PPM.

MOISTURE RESISTANCE: Average change of +–.05% far exceeds +–.5% allowed in MIL-R-10509F.

LOAD LIFE: When tested for more than 1000 hours at full load operation in 125°C ambient temperature, maximum changes are less than +–.5% with average change of less than +–2%.

TEMPERATURE CYCLING: After 5 complete temperature cycles (–65°C to +150°C) there is an average change > .01% with a maximum change of +–.25%.

SHORT TIME OVERLOAD: A D.C. test voltage 2½ times rated continuous voltage but not exceeding 2 times maximum voltage is applied for 5 seconds, changes are less than +–.25% with an average change of less than .02%.

LOW TEMPERATURE OPERATION: Maximum changes less than +–.25% with average change less than .01%.

ACCURACY: Guaranteed within tolerance marked on unit at 25°C.

AGING: Average change in resistance for self-aging, approximately .1% per year.

VOLTAGE COEFFICIENT: Does not exceed .002% per volt.

AXIAL LEAD VITREOUS RESISTORS

Available in three sizes 3, 5 and 10 watts, Series VC3D, VC5E and VC10F. Axial lead resistors are particularly adapted to printed circuit, terminal board, and point-to-point wiring applications. These resistors save considerable space because of the elimination of mounting brackets and terminal lugs. Standard resistance tolerance is ± 5% for 1 ohm and higher and tolerance below 1 ohm is ± 10%. Attractively packaged in a newly designed carton particularly adapted to this new axial lead resistor, beautifully finished with Clarostat's new vitreous shade of teal green.

POWER RESISTOR DECADE BOX

The Resistance Decade Box, Model 240-C for bench use — Model 250 for rack mounting, provides any resistance from 1 to 999,999 ohms for working circuits at the flip of a switch. Six front-panel dials enable selection in 1 ohm increments, the total value being read directly from the dial. Each decade has a power rating of 225 watts maximum, 1,000 VDC or 660 VAC maximum.

Resistance changing switches are of the type that prevent a resistance breakdown between steps, thus protecting delicate meters and measuring instruments in the circuit. Knobs indicate the resistance value being used at a glance.

Clarostat GREENOHM Power Resistors are used throughout. These components are wire-wound power resistors on ceramic tubes and coated with an exclusive Clarostat inorganic cold-setting cement, providing the most rugged, long-lasting, trouble-free power resistor available. The resistors are mounted in rigid metal supports.

Overall length: 240C: 13" long x 8½" deep x 5¾" high, weight 11½ lbs. 250: 19" long x 13¾" deep x 7" high (fits in standard 19" relay rack), weight 18½ lbs.

SUGGESTED USES: Resistance determination, Load Resistance, Meter Multiplier, Calibrating Meters, Providing any desired ohmage as a universal power resistor.

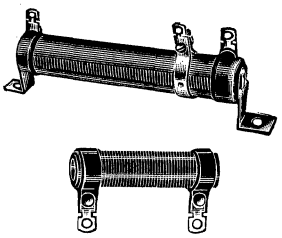
"GREENOHM"* WIRE-WOUND RESISTORS



FIXED TYPES Wire-wound resistors for most rugged applications. Will withstand tremendous overloads and temperature changes without alterating resistance values or appearance. Wire windings on high grade ceramic tubing and coated with special inorganic cement. In accordance with EIA standards, overall tolerances are ± 5% for resistors of 50 ohms and higher. For resistors of 49.9 ohms and lower, overall tolerances are ± 10%.

ADJUSTABLE TYPES Same electrically and mechanically as Fixed types, but incorporating sliding band or bands for tapping any desired resistance values. Slider band tightened by means of screw. In accordance with EIA standards, overall tolerances are ± 10%.

PRECISION WIRE WOUND RESISTORS & NETWORKS

Charles T. Gamble Industries has engineered and designed non-inductive precision wire wound resistors to meet the requirements of Mil-R-93D. These resistors are completely sealed against the effects of high humidity and salt water immersion cycling. The material used in the manufacture of our resistors has a very high dielectric strength. The bobbin material used in winding the resistors is one and the same as the encapsulating material. Matched thermal coefficients of expansion therefore will eliminate the possibility of shorted turns and distorted windings when resistors are being used in their application.

NETWORKS: RC NETWORKS, LADDER NETWORKS, VOLTAGE DIVIDERS, BINARY NETWORKS

Sub-miniature Axial lead Precision resistors have been designed for applications where space is a prime factor. All resistors are hermetically sealed with epoxy resin to protect the windings against the effects of high humidity, and salt water immersion cycling. Resistors can either be inductive or non-inductive wound.

Standard temperature coefficient ±10 PPM/°C. Lower temperature coefficients can be supplied on request.

Standard tolerance 1%, 0.5%, 0.1%, .05%, .025%, .02%, .01%.

Encapsulated printed circuit resistors are designed for printed circuit board application, where space is a factor.

Printed circuit resistors are wound with resistance wire having a very low thermal E.M.F. to copper.

Printed circuit resistors can be purchased in standard tolerances of 1%, 0.5%, 0.1%, .05%, .025%, .02%, .01%.

All resistors with tolerances of 0.1% and below are stabilized by artificial aging and temperature cycling before shipment.

Radial lug type resistors have been designed to meet the requirements of Mil-R-93D.

These resistors are completely sealed against the effects of high humidity, and salt water immersion cycling.

The materials used in the construction of radial lug type resistors are identical to those used in the construction of axial lead types.

These resistors are supplied with a thru hole for mounting to the chassis by means of a #6 thru bolt.

Our standard resistors are supplied with temperature coefficients of ±10 PPM/°C.

Lower temperature coefficients can be obtained upon request.

Standard tolerance 1%, 0.5%, 0.1%, .05%, .025%, .02%, .01%.

CARBON COMPOSITION RESISTORS

TYPE GBT CARBON COMPOSITION RESISTORS

PERFORMANCE CHARACTERISTICS

These are shown in relation to MIL-R-11 specification limits on the following two pages. A performance span or range is given for each important characteristic. You know in advance the typical limits within which IRC carbon composition resistors can be expected to perform.

The performance data are based on many thousands of individual tests made on random samples taken from production. The resistors are tested to MIL-R-11, and to other tests of greater severity.

APPEARANCE

IRC carbon composition resistors have a glossy brown, smooth body. The molded jacket has close dimensional tolerances for trouble-free use in high speed lead forming and inserting machines. There is no wax coating to clog equipment.

FIXED COMPOSITION RESISTORS.

IRC's unique design of ¼-, ½- and 1-watt resistors means better performance and reliability. 50% more molding around the resistance element assures greater moisture protection. The working element is a layer of carbon thermally bonded to an inert glass filament for better resistance and temperature characteristics. Ribbed, shoulder leads are deeply imbedded in the molding to prevent twist or pull-out and act as heat sinks to conduct heat away for cooler operation and longer field life.

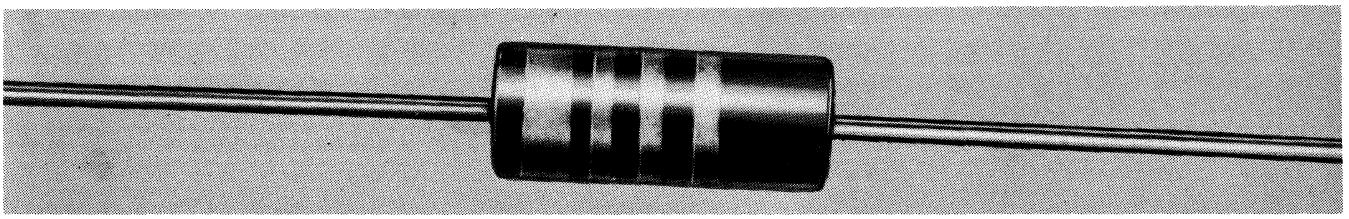
MOLDED WIREWOUND RESISTORS

IRC, Inc.



OUTPERFORMS FIXED COMPOSITION RESISTORS

IRC's new BWH molded wire wound resistor can be used in most applications normally filled by the lower values of composition resistors. The BWH exhibits the inherent stability, reliability, and long-term life characteristics of a wire wound unit. It also provides low resistances unattainable in composition resistors.

Exceptionally stable, small and completely insulated the BWH meets or exceeds all MIL-R-11 performance requirements. Because it is the RC-32 size it will fit any 1 watt composition resistor processing equipment.

BWH resistors are packaged on the exclusive IRC GRIP STRIP, and are available in multiples of 10 and 50.

The rating of this resistor is:

½ watt at 137°C. ambient
1 watt at 115°C. ambient
2 watts at 70°C. ambient.

TOLERANCES & RESISTANCE VALUES. Available in ± 5% and ± 10% tolerances in accordance with standard EIA resistance values. Minimum standard resistance: 0.24 ohm. Maximum standard resistance: 1800 ohms.

COLOR CODING. Resistance values are indicated by standard EIA Color Code bands, and are distinguished from composition resistors by a wide band for the first significant figure.

INSULATION. A plastic housing molded with IRC manufactured thermosetting materials at high pressure and temperature results in a high insulation resistance. This protects the element from effects of extreme climatic conditions. Type BWH resistors are brown in color.

NOISE. Negligible.

SHELF DRIFT. Negligible.

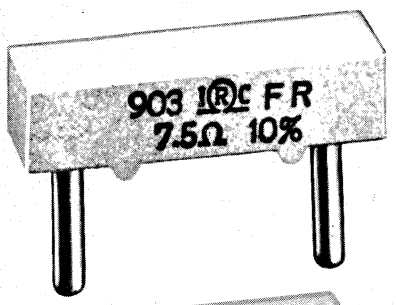
POWER & FUSE RESISTORS

IRC, Inc.



FUSE RESISTORS

This special resistor functions as a resistor under normal conditions, and as a fuse under overload conditions. It is used extensively as a surge-limiting resistor in voltage doubler circuits of TV receivers. Installation of an IRC Type FR fuse resistor in a TV set will prevent overloading of more valuable components and possible fire due to a short circuit. The compact, modern design of IRC fuse resistor measures only 1 25/64" x 11/32" x 3/8". This unit is completely insulated in a rectangular ceramic case, and equipped with plug-in terminals.

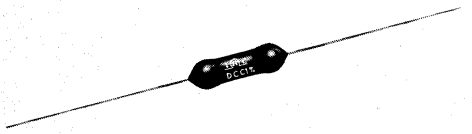
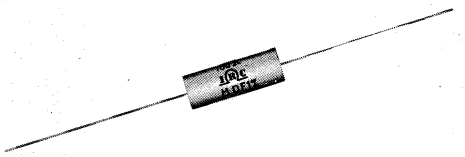
PRECISION DEPOSITED CARBON RESISTORS

IRC, Inc.



DEPOSITED CARBON PRECISIONS are available in ½, 1 and 2 watt sizes. The wide range of values, 1% tolerance, economy, low voltage coefficient, excellent frequency characteristics, predictable temperature, high voltage rating, low noise level, and small size make IRC deposited carbon resistors ideal for application in advanced electronic equipment and critical TV circuits.



MOLDED DEPOSITED CARBON RESISTORS are designed for high reliability, stable performance, low voltage coefficient, low capacitive and inductive impedance in high frequency applications. In miniature ⅛, ¼, and ½ watt sizes, plus 1 and 2 watt types.

Standard tolerance is 1%. (2% tolerance on high range units.) The housing gives complete protection, and offers better heat dissipating qualities. This results in improved load life and maximum moisture protection.

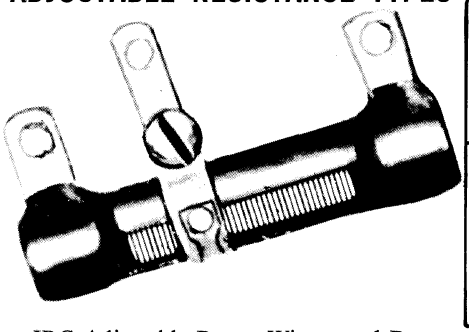
ADJUSTABLE & MILITARY POWER RESISTORS

IRC, Inc.

ADJUSTABLE RESISTANCE TYPES



IRC Adjustable Power Wirewound Resistors are standard resistors with a track of exposed wire to allow for the adjustable feature. The track or slot is made by masking a section of the winding before coating, and then removing the mask after the coating has cured. No wire brushing, which could damage the resistance wire, is used.

The IRC adjustable feature provides the ideal solution to odd resistance values and to handling a variety of line voltages. One or more adjustable lugs may be used for voltage divided applications.

HANDY-PAKS

The neatest, most compact resistor package available, and it's exclusive from IRC. Slimline plastic sleeve keeps leads straight and in place.

- Easier to identify—Type, resistance value and power rating on every Handy-Pak. Resistor color code is easily seen through the plastic.
- Handier to use—Opens at either end. Simply slide package out of plastic sleeve . . . withdraw the required number of resistors and slide the package into the sleeve.
- Quicker to find—Handy-Paks can be indexed by power rating and resistance. Resistors are always visible for inventory.

3 TYPES AVAILABLE—10% tolerance.

. . . ½ watt contains 6 GBT½ carbon composition resistors; 1 watt package contains 4 GBT1 resistors and the 2 watt Handy-Pak contains 3 SR2 resistors.

RESIST-O-CADDY

Ideal for in-home servicing. Plastic pouch folds to 6¾" x 3⅞" x 1½" . . . fits easily in tube caddy or tool chest. Individual pockets keep Handy-Paks secure and orderly.

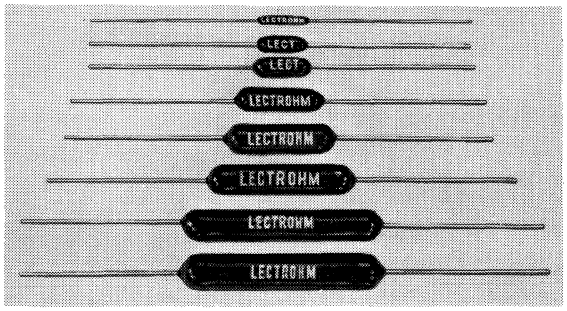
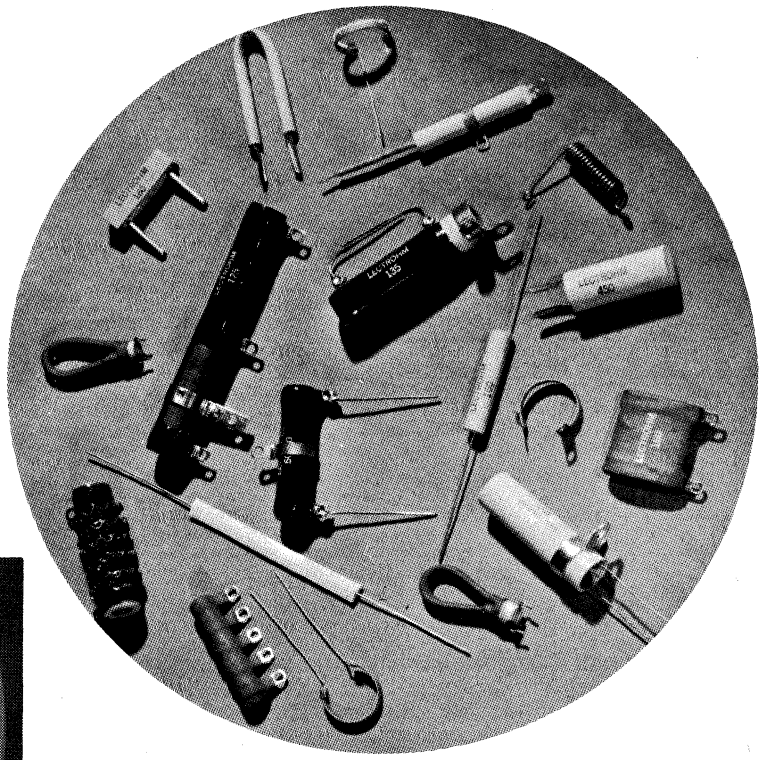
FLEXIBLES



AXIALS

LECTROHM, while manufacturing the standard vitreous line, is also producing whole new groups of types, each designed to solve a special problem. Miniaturization and printed circuit restrictions in space and ventilation no longer are complicated by conventional power resistor size standards. New coating materials and winding methods developed by LECTROHM permit an infinite variety of configurations yet retain operating and life characteristics expected of the finest grade vitreous enameled types. LECTROHM engineers will fit the resistor size and shape to your design.



In addition to the many "Special" resistors illustrated above, LECTROHM manufactures the complete line of standard vitreous fixed and adjustable wire-wound resistors from 5 to 200 watts.

TYPE MOL METAL OXIDE FILM RESISTORS

Mallory MOL resistors have a thin layer of metal oxide evaporated onto a high quality ceramic rod. A precision ground spiral provides exactly the correct resistance. The MOL is essentially non-inductive with superb stability characteristics. May be used in place of either composition carbon, deposited carbon or wire-wound types. Full wattage at 70° C ambient.
To order: Use type number followed by resistance value (e.g., 2MOL1000). **Tolerance:** ±10%.

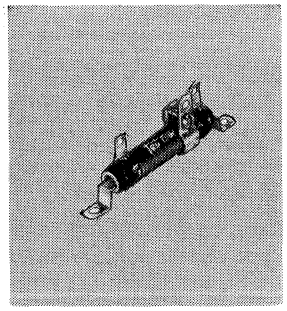
VITREOUS ENAMELED ADJUSTABLE RESISTORS



These resistors are used in applications where it is necessary to make adjustment in resistance periodically; where intermediate values of resistance are required; or when provided with more than one adjustable lug as multiple tap resistors.

The wattage rating between the adjustable band and either end terminal is proportional to the distance between the terminal and the band and should be considered when figuring any maximum section wattage dissipation.

VITREOUS ENAMELED RESISTORS

Axial Lead Val-Type

The cores are of a high grade ceramic material to which are affixed lead and cup assemblies of low expansion alloys. After winding, the units are coated with high temperature vitreous enamel which makes them resistant to humidity. This type unit is capable of continuous operation at 340° C.

This type resistor lends itself to applications where size is a factor in the design and miniaturization of equipment. They are capable of dissipating power equal to their larger counterpart tab type terminal resistors, but because of the axial lead construction they require less space for mounting.

Popular OHMITE "BROWN DEVIL"® RESISTORS

High quality, small size, wire-wound resistors ideal for voltage dropping, bias units. bleeders, etc. They're extra-sturdy, all-ceramic, vitreous enameled. These all-welded construction units have welded high-strength alloy terminals. For perfect electrical connection, the resistance wire is welded to the terminal. They give time-proved protection against shock, vibration, heat and humidity. Their long record of continuous trouble-free service—their wide use in all climates of the world—prove their complete reliability and economy. All units can be conveniently mounted by means of their 1½" tinned wire leads. Standard resistance tolerance is ±5%.

OHMITE Series 99 Resistors

SERIES 99 MOLDED VITREOUS AXIAL LEAD RESISTORS

All welded resistors with 1000 v. AC insulation. They meet general requirements of specification MIL-R-26C for RW57, RW58, RW59, RW67, RW68 and RW69. Chip and break resistant, uniformly molded white vitreous enamel protects against moisture, salt spray and immersion. Vitrified markings resist high temperatures, solvents and abrasion. Can be mounted on component clips. **Tolerance:** ±5%, standard. **Size:** 1.5-watt, 0.422″ lg. x 0.125″ dia.; 2¼-watt, 0.375″ lg. x 0.188″ dia.; 3¼-watt, 0.547″ lg. x 0.203″ dia.; 5-watt, 0.938″ lg. x 0.203″ dia.; 11-watt, 1.781″ lg. x 0.312″ dia. Tinned leads 1½″ lg., #20 AWG except 1-watt, #24 AWG.

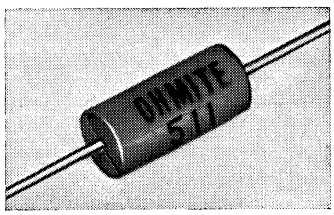
TYPE 884 MOLDED WIREWOUND RESISTORS ± 1% TOLERANCE



These precision power resistors are furnished from stock in power ratings of 3, 5 and 10 watts depending upon resistance. Single layer wound on ceramic core, Type 884 units feature a pressure-molded jacket of tough, resilient, silicone-ceramic material. Negligible inductance at audio frequencies. Temperature coefficient of resistance is 0±20ppm/°C. Values shown are selected from MIL Standard MS90169, MIL-R-10509 and Bell Tel. Labs.

Resistance values marked * are derated in wattage because of maximum voltage gradient considerations. Even with these voltage limitations, however, the wattage ratings are still adequate for most precision applications. However, where wattage requirements dictate, the same value shown In a derated area for either the 3 or 5 watt sizes can be supplied in the next higher wattage as the case may be.

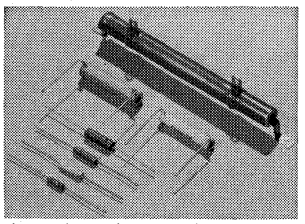
OHMITE R.F. PLATE CHOKES



This series of seven Ohmite single layer wound solenoid radio frequency plate chokes covers the entire frequency range of 3 to 520 megacycles. The four highest frequency chokes are wound on low power factor plastic cores while the other three units are wound on steatite tubes. The single layer winding is designed to avoid adverse harmonic effects within the recommended operating range and also prevents breakdown from high r.f. potentials.

NEW OHM'S LAW CALCULATOR

Redesigned! This new, improved version of the famous Ohmite Ohm's Law Calculator — popular the world over with servicemen, engineers and students — now has scales for solving parallel resistance problems, AND a standard slide rule. More useful than ever! With one setting of the scale the calculator gives the answer to any Ohm's Law problem—reading directly in ohms, volts, amperes, and watts. Three of the new scales on the back provide a quick, one-setting means of solving parallel resistance problems. The slide rule scales will multiply, divide, find squares, and square roots.

EXCEPT ⅛W SIZE

Ohmite's famous molded composition resistors, in the ⅛, ¼, ½, 1 and 2-watt sizes, conform respectively to Styles RC05, RC07, RC20, RC32 and RC42 of MIL-R-11E and meet all the requirements of this military specification.

Little Devils have molded insulation and feature great stability, low noise level, low voltage coefficient, high insulation breakdown voltage and rapid heat dissipation. They may be used at full rated wattage at 70°C (158°F) ambient temperature.

Available from stock in the standard EIA resistance values in the tolerances and resistance ranges shown in the price table below. Ratings for maximum continuous RMS voltage drop are high: 150 volts for ⅛ watt units, 250 volts for ¼ watt, 350 volts for ½ watt, 500 volts for 1 watt and 750 volts for 2 watt units.

STANDARD EIA VALUES

Figures in large, bold type are ±10% EIA values. *All* values listed are ±5% values. Price table lists the various "Little Devil" sizes and indicates the tolerances and resistance ranges in which they are supplied.

SPEER FIXED COMPOSITION RESISTORS

Speer resistors are made on modern high speed equipment which molds component material into one integral, dense unit. Heavy pure tin-coated copper lead wires, thermosetting bonding resins, finely divided inorganic fillers, and specially produced and treated high conductivity materials such as carbon blacks are the materials used.

During the molding process, preformed insulating shells of bonded inorganic fillers are filled with carefully adjusted conducting compounds. The binders and fillers of both shell and core are completely compatible and, under high pressure, allow the formation of an inseparable bond between core and shell. The thermal transfer characteristics of shell and core are essentially equal.

After high pressure molding, the "green" resistors are cured in precisely adjusted, indirectly heated continuous tube furnaces. The resin cure is complete and the final resistance of the unit is thereby fixed. A vacuum and pressure of special high temperature material develops maximum protection against moisture penetration.

The special impregnant used is completely stable under all operating conditions. This material seals and produces an effective barrier to moisture penetration.

Speer resistors are color coded with special paints developed to provide a high degree of solvent resistance.

All Speer resistors have lead wires of high conductivity copper with a solderable coating of heavy pure tin. The wires are completely precoated before assembly, so that the solderable surface is unbroken over the entire area. The tin coat is controlled to a thickness of .0003"-.0008", several times as heavy as that on ordinary tinned wire. The use of pure tin affords superior storage life and offers the ultimate in low temperature solderability.

The impregnated resistors are measured on high speed automatic resistance sorters and classified into appropriate resistance nominals and tolerances. The color bands and protective outer film are applied after sorting.

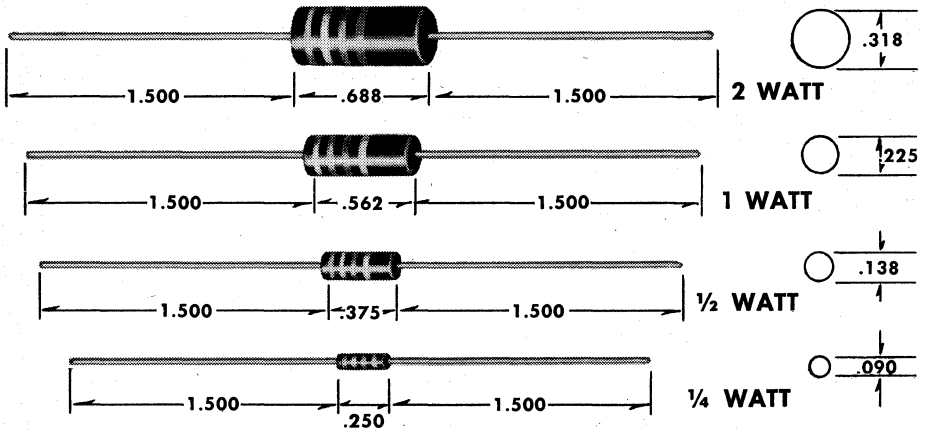
STACKPOLE

FIXED COMPOSITION RESISTORS



Stackpole Resistors offer superior performance in terms of load life, moisture resistance, shelf life, and other important characteristics. Available in ¼, ½, 1, and 2 watt insulated types in resistance values with 5%, 10% and 20% tolerances as shown below.

EASIEST SOLDERING

is asured thanks to an exclusive extra solder coating applied after the usual tin dipping. Leads of Stackpole Resistors solder readily by any method—dip or iron—stay tarnish free even after months in storage. And, their baked-on color codes resist solvent scrubbing operations . . . maintain uniform, attractive appearance.

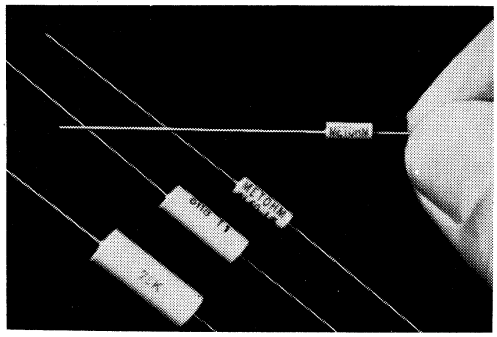
Metohm® RESISTORS
Metal Film Precision Type

THE STANDARD OF QUALITY FOR MILITARY AND INDUSTRIAL PURPOSES

FEATURES

- **High stability and reliability**
- **Designed to exceed MIL-R-10509F**
- **Close resistance tolerance**
- **Wide range of resistance values**
- **Stock or made-to-order types**
- **1/10, 1/8, 1/4 and 1/2 watt sizes**

Exceeds MIL-R-10509F



In critical space-age electronic circuitry, METOHM metal film precision resistors guarantee high reliability, high stability, close accuracy, low TC and miniature size. Metohms are precision made under "white-room" conditions in the industry's most modern plant.

MIL SPECS. — All Metohm precision resistors are designed to exceed MIL-R-10509F char. C, D and E.

POWER RATING — is based on full rated load in an ambient of 125°C.

WELDABLE LEADS—gold plated Dumet leads and nickel "270" leads are available for weldable applications.

STOCK METOHMS — RN55, 60, 65 and 70 Metohm resistors, char .C, TC Code T2 (±50PPM) are stocked in MIL standard values listed below. Standard tolerance is ±1%.

MADE-TO-ORDER TYPES — see data in accompanying tables for non-stock resistors available in production order quantities.

CONFORMAL COATED TYPES—also available in 1/20, 1/10, 1/8, 1/4 and 1/2 w. sizes. Durable solvent resistant coating allows smaller size. Ideal for micro module circuitry where space is at a premium.

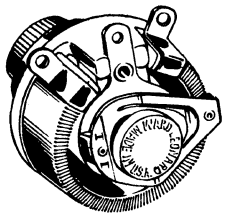
Vitrohm® RING RHEOSTATS

TYPE 25R

TYPE 50R



Ward Leonard Ring Rheostats are especially suited for use in electronic and electrical circuits where gradual and positive resistance change is essential. Balanced contact arms, self-lubricating metal graphite contact shoes, and no backlash in the drive shaft combine to assure uniform contact pressure and smooth operation.

Standard shaft length for back-of-board mounting on 1/4" panel.

Standard Resistance Tolerance ±10%.

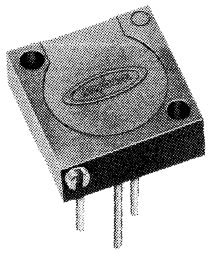
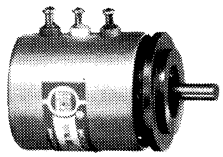
MICROPOT® TRIMMING POTENTIOMETERS

Amphenol produces 10 complete series of Micropot trimmers — from subminiature square trimmers to standard sizes. Amphenol trimmers are offered in general purpose, humidity-proof, high temperature, or humidity-and-high-temperature models, in a wide choice of resistance ranges and end terminals. Amphenol trimmers have an adjustment screw for an extremely fine degree of selectivity. Wire-wound resistance elements are up to 50% longer than competitive types.



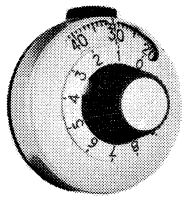
MICROPOT® METAL FILM TRIMMERS

Amphenol's Micropot metal film trimmers provide infinite resolution with a wide range of resistance value from 50 to 10,000 ohms.



MICROPOT® PRECISION POTENTIOMETERS

Amphenol offers a complete line of Micropot potentiometers for precision application—military and commercial — ranging from ½-inch to 3-inches. They are available in single-turn or multi-turn models with high resolution and a wide range of resistance values.

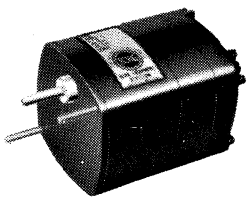


MICRODIAL® CONCENTRIC DIALS

Engineers consider the Amphenol Microdial line the most comprehensive in the industry. Concentric scale Microdials are available in three basic series. Each features epi-cyclical gearing to eliminate ambiguity, and large numerals for high readability. Each dial is available with or without brake. Most Microdial models are offered in a choice of color combinations for coding.

MICRODIAL® DIGITAL DIALS

Amphenol's digital Microdial line includes three, four, or five digit models. The 1300 Series has optional 10, 100, or 1000 turns. The 10-turn 1330 Microdial has internal illumination, convex lens, and is available with or without brake. Amphenol dials offer 1000:1 indexing accuracy, and are virtually free from accidental setting changes.



SUB-FRACTIONAL MOTORS

Amphenol's line of sub-fractional h.p motors includes synchronous, induction, hysterisis synchronous, or low inertia types, in two, four, six or higher pole models. Amphenol motors speed/torque ratios meet the most exacting requirements of instruments, controls, and related products.

TO ORDER ATOHM POTENTIOMETERS:

Indicate series, lead configuration, resistance value and accessory, if any.

For example:

ART 12 — P — 503 M

- ART 12 — Series
- P — Lead Configuration (This letter not required when ordering 110, 120, 300 and 870 Series units because model numbers indicate lead configurations.)
- 503 — Resistance Value (First two digits are significant, the third digit indicates number of zeros to be added. For example, 503 represents 50,000 ohms.)
- M — Panel Mount

*Special resistances available on order.

**Lead Configurations: L=Flexible Leads; P=Printed Circuit Pins (on ART10P model pins are located on side); S=Solder Lugs; W=Solid Wire Leads; E=Edge Mounted Printed Circuit Terminals (on ART10E model pins are located on edge); H=Solder Hooks.

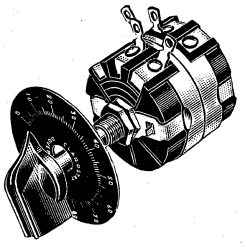
SOUND-SYSTEM CONTROLS

For proper control of volume and tone alike, Clarostat offers a choice of several controls, such as L- and T-pads, output attenuators, and individual-speaker volume controls as used for drive-in theatre installations. These are not ordinary radio controls but rather sound-system controls designed and built for critical requirements.

CONSTANT-IMPEDANCE CONTROLS



Self-compensating volume controls known as L-pads and T-pads for use in sound systems. Rated at 2½ watts DC, but will handle up to 10 watts audio. Continuous range from 0.5 to 30 decibels attenuation in 90% rotation. Last 10% affords infinite attenuation. With Clarostat constant-impedance L-pads and T-pads the input and output impedances of associated circuits can be kept within the limits of a constant required value. Knob and dial plate furnished with each control.

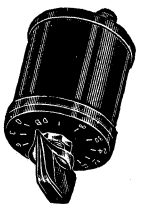
CONSTANT IMPEDANCE OUTPUT ATTENUATORS



Series "CIB" rated at 10 watts, but will handle up to 30 watts in audio circuit. Linear attenuation provided in 3 decibel steps up to 24db, then 30db followed by infinity. Equipped with dial plate and bar knob. One-hole mounting, ⅜" bushing diameter. 1" shaft. This control has been developed to meet the need for a constant-impedance attenuator capable of handling considerable power without measurable insertion loss. Recommended as an output level control for power amplifiers, or as an input attenuator for individual or for a group of speakers in a public address system.

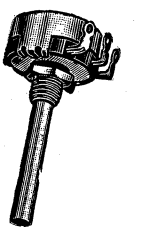
SPECIAL DRIVE-IN THEATRE L-PAD

To meet the needs of theater sound systems, more especially those of drive-in theaters, a special 8 ohm L-Pad is now available, containing two separate windings of 5 ohms and 40 ohms. Also 50 ohm linear rheostat and 35 ohm tapered rheostat, as listed. Units have ¾-32 bushing ¾" long, and 1½" round shaft. (Knob furnished with each control).



Cat. No. CM8727-1 8 ohm L-Pad
Net Price $1.80

SPACE-SAVER CONSTANT-IMPEDANCE ATTENUATORS

Characterized by reduced depth and diameter, these attenuators are ideal for use in remote control of speakers since they are small enough to be installed in standard electrical boxes in the home, office, stockroom, etc.

These controls are rated 2 watts D.C., but will handle up to 4 watts of audio, depending upon the type signal being handled. (As the frequency becomes constant, wattage reduces to 2 watts or the same as the D.C. rating).

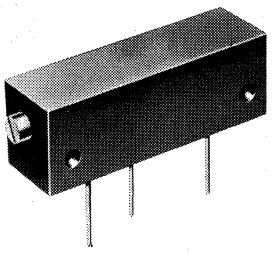
SERIES 76JA

Multi-turn Trimming Potentiometer



A miniature, 10-turn trimming potentiometer that offers up to 15 times the winding length available in comparable units. This feature results in setability and resolution exceeding that of trimming potentiometers several times the size. Brief specifications include a power rating of ¾ watt at 85°C derated to zero power at 150°C, resistances from 100 ohms to 20K ohms standard with other values offered on special order, standard resistance tolerance of ±5%, printed circuit or solder lug mounting, overall dimensions of only 1.250″ x 0.437″ x 0.328″.

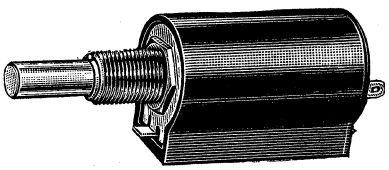
SERIES 62JA

Commercial Multi-turn Potentiometer



A 10-turn potentiometer offering electrical operating characteristics comparable to units costing far more. Designed specifically for the industrial instrumentation market, the Series 62JA has the inherent advantages of far greater resolution in trimming, better instrument control and settings for all types of electronic equipment. Brief specifications include: ⅞″ diameter, 1 5/16″ deep behind panel, bushing and shaft or split-locking bushing with screwdriver slot, 2 watts @ 25°C, derated to zero @ 85°C, 1000 to 100K ohms standard — others available, absolute linearity of ±0.25% standard, closer on order.

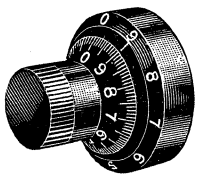
CLARODIALS

Ten-Turn Concentric Scale Dials



Calibrated dials designed for multi-turn potentiometers up to 10 turns or other rotary devices. CLARODIALS require only one inch of panel space. The knob attaches directly to the shaft, and the body of the dial is mounted rigidly to the panel. As a result, accurate readings with a ratio 1000:1 for ten turns are provided with zero backlash and no reading error. CLARODIALS are made of anodized aluminum for years of attractive use. Mounting requirements are ¼″ shaft and ⅜″-32 NEF-2A bushing. Adapters for ⅛″ dia. shafts are available.

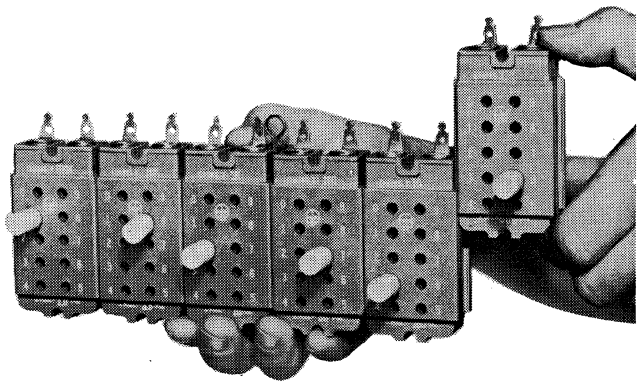
CLARO-DEC PRECISION RESISTANCE DECADE BOX

The most flexible innovation yet in precision resistance decade boxes, the Claro-Dec serves many applications with all the versatility needed for the job. Claro-Decs (within established parameters of current) are used whenever accurate steps of resistance values between .1 ohms and 900K ohms, ±1%* are required. Selection of desired steps of resistance is accomplished by insertion of a banana plug into the proper, marked front panel hole on the unit. Individual or multiple Claro-Dec units are flush panel or breadboard mounted with equal ease. Units may be physically ganged by sliding the molded-in tongue-and-groove together and electrically series connected with a supplied wire jumper or accessory banana plug.



Net Each: $3.95

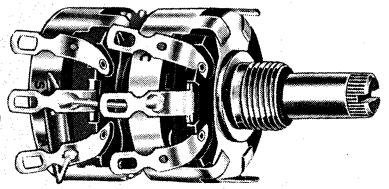
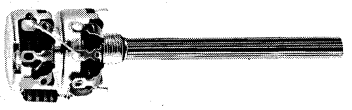
IRC-CTS SPECIAL PURPOSE CONTROLS

IRC, Inc.



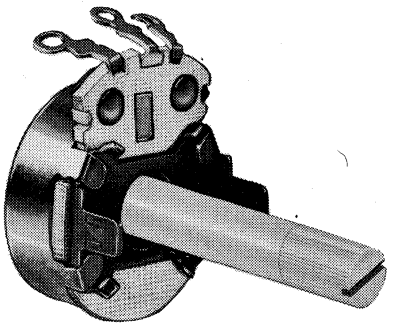
TV ATTENUATORS for on-the-spot adjustment of signal input to TV set. In most cases it corrects or reduces adjacent channel interference, background picture on weaker stations, poor definition, picture and sound breakover. Type QJ-3 is widely used in service work to duplicate fringe area signals when near strong local station.



LOUDNESS CONTROLS that are continuously compensated to boost lows and highs as volume is decreased. Maintains depth and brilliance even at whisper level. The LC-2 can easily be wired into most audio circuits. Typical installation instructions included. Uses types 76-1, 76-2 or 76-4 switches.

TV HEIGHT CONTROLS

AVOID CALL-BACK INCONVENIENCES



USES

This control is supplied for reliable replacement of TV Height Controls and other controls in B+CIRCUITS — such as AGC,

NOISE GATE,

FOCUS,

FRINGE LOCK and

SYNC controls — which have become unsatisfactory because of element etching due to voltages present in the particular circuitry.

FEATURES

- Premium quality control (originally designed for rugged service in military gear)
- 1 watt rating, 750 V. max. between outer terminals
- Small size — 15/16″ diameter — same as most original controls
- Nylon shaft — slotted and knurled — easily shortened where required
- Tab mounting
- Rear adjustment

HANDSOME STOCK CABINET

The same spacious stock cabinet is provided with either the No. 90 or No. 92 stocks. Permits ready conversion of Basic Stock to Expanded Stock. Sturdy two-shelf metal cabinet measures 17⅞″ wide, 11¹⁄₁₆″ deep and 9″ high. Provides twelve large "see-thru" drawers with new locking divider feature. Drawers measure 11″ deep, 4″ wide and 2″ high—956 cubic inches of stock space! All needed dividers are included. Both drawer front and bottom labels provide full location and identification data.

EXTENSIVE VARIATION OF CONTROL TYPES

CONCENTRIKIT Dealer Control Stocks provide an extensive variation of single and concentric dual control types. Included are a wide selection of control mountings, shafts, and power switches with both carbon (½ watt) and wire-wound (4 watts) front and rear sections. Control mountings include ⅜″, ⁷⁄₁₆″ and ½″ diameter bushings, tab mounting plates and printed circuit brackets. Shaft styles include ¼″ and ³⁄₁₆″ diameter universal shafts, screw-driver slotted and insulated shafts, rear adjustment feature and a large selection of exact duplicate shafts which require no cutting or modification.

Rotary and pull-push power switches attach to either single or concentric dual styles. Concentric dual controls include carbon front and rear sections, wirewound front and rear sections and wirewound front sections with carbon rear sections. Carbon units are equipped with printed circuit terminals for universal use. Broad selection of resistance values and tapers. Replacement data, pricing information and full instructions included.

CONCENTRIKIT DEALER CONTROL STOCKS

Most widely used control replacement system, the new CONCENTRIKIT stocks employ the unique adaptability of this true control parts system to provide top coverage of needed replacement controls. Parts included have been carefully selected for broadest combinations for TV, radio, auto sets and high-fidelity equipment. The exclusive features of CONCENTRIKIT afford a nearly endless variety of single and concentric dual controls.

Two specially planned dealer stocks are available. No. 90 is a Basic Stock of Concentrikit parts. No. 92 is an Expanded Stock providing over three times the replacement coverage. Both stocks are housed in the same large metal cabinet with twelve "see-thru" drawers. Special labelling supplies quick location and identification of parts. No. 91 Conversion Stock changes the Basic Stock into the Expanded Stock.

IRC-CTS TYPE 4W CONTROLS AND BASE ELEMENTS

IRC, Inc.

Types WPK and WPS are compact, 1¼" diameter wire wound controls available for replacement use in two popular shaft styles and an extensive variety of resistance values and tapers. Many stock numbers can be supplied as factory-assembled units. All stock numbers may be assembled in field using Base-Element with SK4 or SK5 Kit as desired.

Resistance elements are uniformly wound with highest grade alloy resistance wire on special form that withstands high temperature without shrinking. Pressure molded plastic housing is designed for maximum heat dissipation and accurate location of terminals. Contactor and collector are of long-wearing alloy that makes direct contact.

Resistance tolerance is ± 10%.

EXACT DUPLICATE SHAFTS

Stock numbers and corresponding lengths are listed on these pages. In general, the last three numbers of the stock number indicates shaft length from control mounting face (not end of bushing) to end of shaft. Of the last three numbers, the first indicates number of inches and the second and third number indicates the number of 32nds. For Stock No. P1-210, length is 2 10/32" or 2 5/16". For inner shafts employed with K3 CONCENTRI-KIT, subtract 3/32" from dimension indicated by stock number.

There is an IRC-CTS Exact Duplicate Shaft available for nearly every concentric dual control. These Outer and Inner Shafts require no modification. Shaft lengths are held within close limits to original shaft lengths. Careful attention is given to end trims for fit to original knobs. The specifications on this page provide dimensions and use.

PROVIDES VERSATILITY AND EASE OF ASSEMBLY

SNAPTROL. Newest of three IRC replacement systems designed to provide servicing technicians with satisfactory replacements for comprehensive coverage of single controls, tandem dual controls, matched stereo controls and concentric dual controls for television, radio, auto sets and high fidelity equipment.

SNAPTROL provides a broad variety of basic, factory assembled control sections, shafts and switches which snap together to provide a wide selection of replacement controls. Literally, it is a "snap" to assemble nearly any standard or special control.

SERIES 45 INDUSTRIAL CONTROLS. With a variety of five basic control components, the Series 45 line permits quick assembly of 12,631,500 different control specifications. These include single, double, triple and quadruple section controls, with or without power switches, in all popular styles and ranges needed for industrial electronic equipment.

Series 45 components are completely compatible and interchangeable with SNAPTROL. Together, these two snap-together systems provide an almost unlimited means to furnish unusual and special controls for industrial applications.

EASY TO USE. Parts assemble into exact duplicate control in 15 to 30 seconds. Sections completely factory assembled. No shaft cutting or modification needed.

GREATER VERSATILITY. SNAPTROL provides new and unique designs which provide for better utility and adaptability of component parts:

1—Interchangeable Control Mountings. ⅜", 7/16" and ½" diameter bushings of varying lengths and bores, quickly thread into front control sections. Accommodates thick panel requirements *without* extra bushing or adjuster. Specially designed tab mounting plates or printed circuit brackets easily attached in place of bushings. This exclusive new design feature reduces the number of front sections needed and extends their use in a greater variety of replacement needs.

2—Printed Circuit Terminals. All carbon control sections are equipped with terminals that will handle both conventional and printed circuit wiring. This original IRC-CTS terminal design doubles the adaptability of control sections.

3—Rotary or Pull-Push Power Switches. Either type of power switch snaps onto either carbon Front or Rear Sections. Another exclusive IRC-CTS design feature which very considerably increases the utility of control components.

4—Uniform Diameter Rear Section Shafts. New design of rear section (inner) shafts provide uniform diameter — permits use of heavy-walled front section (outer) shaft contributing better concentric shaft operation and superior knob retention. Simple compression type adapter fits rear section shaft to knobs normally requiring larger diameter. No drilling or modification of knobs needed. Shafts are flatted or slotted as required — no shaft insert or tine needed! This new design reduces the number of exact length shafts required for broad replacement coverage.

5—Front Sections Serve for Single Controls. Without modification or adapters, all SNAPTROL front sections may be used for single control replacements. Provides practical use of single front section for special bushings, tab mountings, printed circuits, special shaft needs and a variety of power switches. No other section-type control system provides such broad versatility.

FEWER COMPONENT PARTS. Because of the realistic design features provided, SNAPTROL requires far fewer items of components than any other section-type exact duplicate control system which offers so broad a replacement coverage. (Over 1700 exact duplicate concentric dual controls and many thousands of single controls.)

BEST SELLING CONTROLS. SNAPTROL is a special replacement design of the world's most frequently specified and most widely sold CTS Series 45 control. Over 300,000,000 in current use — a strong testimony to the quality and performance of these outstanding controls.

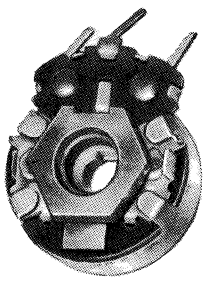
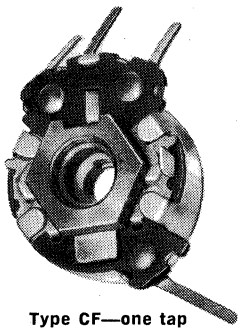
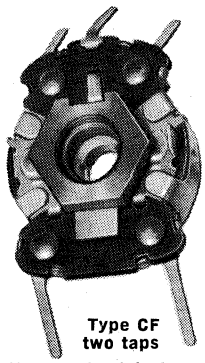
SNAPTROL CARBON AND WIREWOUND FRONT SECTIONS



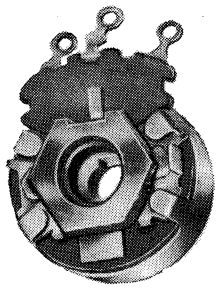
Type CF—no tap



Type CF—one tap



Type CF two taps



Type WF

Type CF Carbon Front Sections and Type WF Wirebound Front Sections are factory-assembled controls supplied without control mounting, shaft or dust cover. Bushing, tab mounting plate or printed circuit bracket thread into front section as required. Carbon or wirewound rear sections snap onto either style front section for concentric or tandem dual controls. A variety of single or concentric outer shafts snap into front sections. Either rotary or pull-push switches will snap onto CF Front Sections. WF Front Sections will not operate switches. Printed Circuit Terminals are employed on CF sections while standard hole-type terminals are supplied on WF sections. Diameter of either front section is $1\frac{5}{16}$". Wattage rating: CF Sections — ½ watt, WF Sections — 5 watts *(linear tapered sections)*.

CONTROL MOUNTINGS FOR FRONT SECTIONS

A variety of control mountings permit the use of SNAPTROL Front Sections for many different replacement controls. Bushings of varying diameters and inside bores thread into front sections. Tab mounting plates and printed circuit brackets attach to front section with special male nut supplied with each.

This exclusive design feature of selectable control mountings actually reduces inventory investment for distributors and servicing technicians. For a specific resistance value and taper, only one SNAPTROL Front Section is needed—in contrast to other systems where an additional front section is needed for *each* different control mounting.

CARBON & WIREWOUND REAR SECTIONS

Type CR Carbon Rear Sections and Type WR Wirewound Rear Sections snap onto SNAPTROL Front Sections for use as either concentric dual or tandem dual controls. Rotary or pull-push power switches snap onto CR sections. WR sections do not accept switches. Rear or inner concentric shafts snap into either type of rear sections for concentric dual operation. SS7A Intersection Insert provides tandem dual operation. Additional tandem sections may be snapped on by use of SS13 Multisection Couplers.

EXACT DUPLICATE SHAFTS

SNAPTROL Exact Duplicate Shafts are supplied to close tolerances against original control specifications. Easily snap into molded nylon rotors of front or rear sections. Uniform diameter of rear section (inner) shafts permit use of heavier wall on front section (outer) shafts providing better concentric rotation and superior knob fit. Knob Adapter (Stock No. KA1) fits rear (inner) shaft to knobs normally requiring larger diameter shafts. No drilling or modification of knobs is required. No cutting of shafts is needed with SNAPTROL Exact Duplicate Shafts! Easy to install!

IDENTIFY ANY OF 12,631,500 SERIES 45 CONTROLS WITH THIS SPECIFICATION NUMBER SELECTION CHART

Suppose triple controls are wanted with these specifications: 500K log taper panel section, 10-meg linear taper second section, 10K ohms linear taper third section, plus SPST switch and a 1½" split-knurled shaft. The specification number would be 45A504D106D103S20, derived from this chart as follows: 45 for Series 45, A504 for the panel section, D106 for the second and D103 for the third sections, S for SPST switch (symbol omitted if no switch wanted) and 20 for the desired shaft. Omit codes of unwanted features. Ex: 45D50116 for single control. This is a linear taper 500 ohm control with #16 shaft (2" full round), no switch.

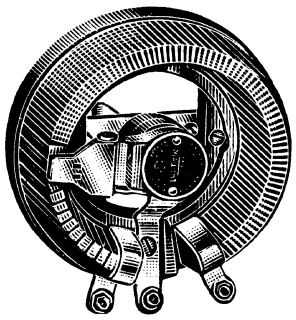
MALLORY Power Rheostats



Mallory power rheostats (Type K) utilize vitreous enamel construction for maximum environmental protection. All current-carrying parts are electrically insulated by dimensionally stable ceramic. Type K rheostats have been tested to 5,000 volts, without breakdown between electrical and mechanical components. U/L voltage ratings are as follows: 25K, 50K, 75K, 100K and 150K—300 volts; 225K, 300K and 500K—600 volts.

The contact mechanism features the patented spring-hinge arm. This spring loaded assembly ensures constant and correct pressure on the rheostat windings. An added advantage is that the high-purity graphite block may be removed easily for cleaning, or, if necessary, for replacement.

Type K rheostats are furnished in a standard linear taper and with all mounting hardware, dial plate and knob. Special two- and three-section tapers are available on special order. All values shown are for continuous operation in free air.

VITREOUS ENAMELED RHEOSTATS

Twelve sizes in wirewound, vitreous enameled rheostats are stocked by Ohmite distributors all over the country and at the Ohmite factory. This selection, the most extensive available to industry, covers ratings that meet the major portion of design, production and emergency needs. Ratings of 7½, 12½, 25, 50, 75, 100, 150, 225, 300, 500, 750 and 1000 watts are standard.

FEATURES OF CONSTRUCTION: Ohmite rheostats are designed to produce permanently smooth, close control. The construction is all ceramic and metal; there is nothing to smoke, char, shrink, or shift. All models have insulated shafts with provision to keep the rheostat from turning on the panel. The resistance wire is wound over a solid ceramic core. Each turn is a separate resistance step and is locked against shifting by vitreous enamel. The core and base are also bonded by vitreous enamel. The pivoted universal-action-mounted contact brush is of copper-graphite or silver-graphite on the heavier current rheostats. It rides upon a large flat surface and assures perfect contact without wear on the wire. Pressure at the contact and at the center lead are independent. Ohmite Rheostat Models H, J, G, K, L, P, and N, all marked Series A, are listed under the Underwriters' Laboratories Reexamination Service.

RATING: The current carrying capacities shown in the tables are for use in *free air;* when units are enclosed, these currents should be reduced possibly as much as 30% to 50%, depending upon the degree of ventilation. The rated current will cause the rheostat to dissipate its rated wattage when the full resistance is in the circuit.

MODEL "C" — MINIATURE RHEOSTAT

In this era of miniaturization and transistorization, the Model C enlarges the horizons of designers by providing greater design flexibility. In addition to its small size, its versatile solder terminals will also plug into common transistor sockets or circuit boards. It is stocked with both standard and locking type bushings.

MOLDED COMPOSITION POTENTIOMETERS, ½ and 2 WATTS

Used in commercial and military electronic applications where high quality and dependable performance are important. Type AB, 1$^{5}/_{32}$" dia., is rated 2 watts at 70°C ambient and is available with ⅞" slotted shaft (CMU), 2" unslotted shaft (CU, CA, CB, CCU dual unit) and locking type slotted shaft (CLU). Type AS, a miniature unit ½" dia. rated ½ watt, is available with locking type shaft (Style AS) or ⅞" slotted shaft for knob control (Style ASM).

Because of their molded composition elements, these units outlast and outperform film type units. Noise level is exceedingly low. Single control Type AB units extend ⅝" behind panel; dual control 1$^{17}/_{64}$". Type AS miniature unit extends 1$^{1}/_{16}$" behind panel. An SPST switch for single Type AB units is available. Units are dust and splash proof, fungus and corrosion resistant and meet the latest requirements of MIL-R-94. Styles CMU, CLU, Styles AS and ASM conform respectively to MIL-R-94 Styles RV4N, RV4L, RV6L, and RV6N.

TRIMMING POTENTIOMETERS

Rectangulars — Large diameter mandrels dissipate heat efficiently to eliminate burnouts and open circuit failures. Dual wipers maintain positive contact under shock. Military and industrial models. **Squares and Rounds** — Mandrel and case configurations contribute to high power dissipation. All models meet or exceed applicable environmental military specifications, and are humidity-proof at no extra cost. **Ultraminiature Transistor-Size Models**—Volume of only 0.02 cubic inches allows mounting in one-fourth the usual space. Ideally suited to high-component-density, solid-state, printed circuit applications.

spectrol PRECISION POTENTIOMETERS

For most applications, choose from the complete Spectrol series of single-turn, three-turn, five-turn, ten-turn, precision wirewound potentiometers listed on these two pages. Many models can be ganged and easily phased in the field.

Close linearities are assured by winding equipment designed and built in-house by Spectrol. Other quality features include: fine resolution from extra-long resistance elements; high reliability through a unique "whisker" slip ring brush that assures positive contact under severe shock and vibration, yet exhibits low torque and long rotational life; and mounting flexibility with optional servo and bush mountings. All models meet or exceed applicable military and commercial specifications for rotational load life, temperature range, shock, vibration, humidity and salt spray.

spectrol NON-LINEAR POTENTIOMETERS

On the tables below, high and low values of resistance, with corresponding "best practical" peak-to-peak conformity obtainable, are given for the functions in each model size under the conditions of full electrical rotation and unloaded slider. For function angles less than full rotation, resistance and conformity values can be calculated based on resistance being directly proportional to the function angle, and conformity being inversely proportional to the function angle.

Empirical (Data Points)

Resistance and conformity is given in the table below in terms of S (maximum $\frac{\Delta\left(\frac{e}{E}\right)}{\Delta X}$), provided the following conditions are met. $0 \leq \frac{e}{E} \leq 1, 0 \leq X \leq 1$ and $\frac{\Delta\left(\frac{e}{E}\right)}{\Delta X}$ does not change sign (i.e., no slope reversal).

spectrol SWITCHES AND MULTIDIALS®

Spectrol Model 88 Rotary Selector Switches introduce a new dimension of flexibility to discrete component circuitry. Now, for the first time, miniature switches are available in volume quantities at production-line prices for mounting directly on printed circuit boards, or for panel mounting. Designed with only two moving parts, these unique ½-inch switches have application wherever printed circuit boards are used . . . can be used to make other components do multiple duty. Spectrol offers the new switches in both ten-position center-pin and nine-position center-pin configurations for wide use on either double-sided or single-sided boards.

Multidials: Spectrol also offers a complete line of precision turns-counting dials for use on multi-turn potentiometers and other rotating devices.

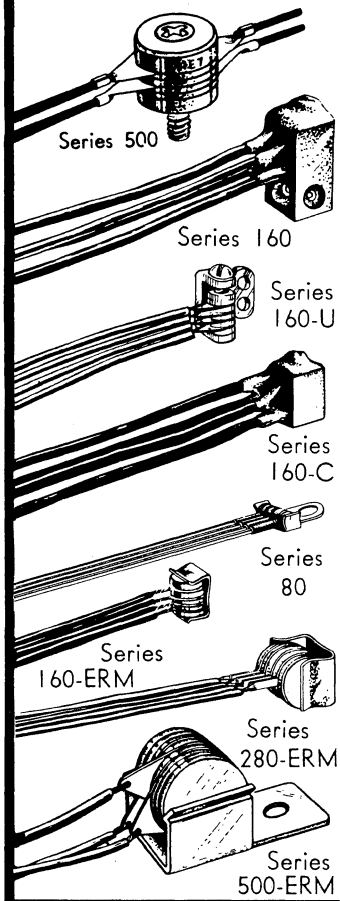
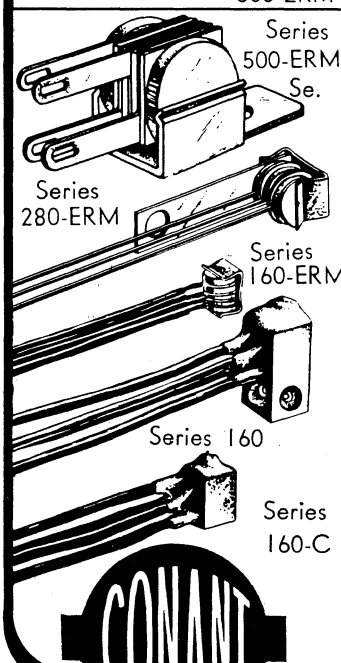
CONANT Miniature Metallic Rectifiers

STANDARD SINCE 1933

Illustrations approx. actual size





CONANT MINIATURE METALLIC RECTIFIERS

All Conant rectifiers are manufactured to the highest quality standards from individually tested and graded cells. Copper oxide cells are produced by the exclusive Conant Process and have 24K gold contacts applied in high vacuum.

The Conant Complete Color Code permits identification of rectifier type by color and physical form.

Only basic standard rectifier types are listed below. Many other standard catalog items are available and we are prepared to produce special items to meet customers' special requirements.

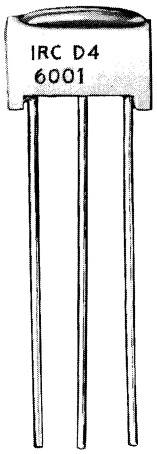
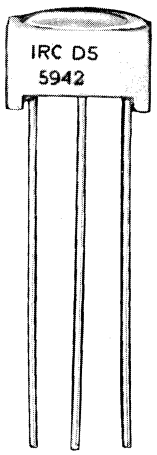
DUAL DIODES

IRC, Inc.





DIODES. Universal selenium dual diodes for horizontal phase detectors and remote control in TV receivers. Also used in radio control devices for model planes, and other circuits. Available in four basic types.

The small size, economy, ease of installation and reliable construcion of the IRC dual selenium diodes make them ideal for many low-voltage, low-frequency applications. To suit them to various circuits, these dual diodes have either common-anode, common-cathode, or series form of internal connection. The cells in each unit are matched to assure electrical balance.

Alloy-plated leads facilitate soldering. No clamp or other mounting device is needed, since the three leads readily support this flyweight unit.

Designed for Long Life

Construction features include an integral heatsink and a "floating" spring that gives proper pre-load over the full operating temperature range. No paper, laminates or other material that might absorb moisture are used. Moisture-excluding materials cushion the active elements and isolate them from encapsulant.

Electrically Balanced and Noise Free

IRC processes each selenium cell to give it a smooth, uncontaminated surface and periphery with no fractures. This technique insures uniform current density over the entire cell area and prevents noisy, unreliable operation.

To indicate polarity, one corner of the case has a diagonal cutoff. This assures correct orientation of units in automated assembly, and allows use of both sight and touch to get proper polarity at manual assembly and inspection.

THERMA-LINK RETAINERS—FOR T0-5, T0-18 TYPE TRANSISTORS

These devices are designed as efficient retainers and heat sinks when mounted to P-C boards due to their excellent conductivity and extra mass. They also provide an efficient thermal link between transistor and chassis or heat sink. Beryllium copper spring fingers firmly retain transistors, yet fit wide case diameter variations and make transistor insertion easy. Available with Beryllium Oxide when a reduction in capacity between transistor and ground is needed in high frequency applications. Bulletins 141, 144; test report 206.

"FAN TOP" SERIES—FOR T0-5, T0-18 TYPE TRANSISTORS

The exclusive "Fan Top" design gives unbelievable case temperature reduction in natural or forced convection. It allows location of other components close to transistors, yet adds virtually nothing to board height. Beryllium copper spring fingers firmly retain transistors, yet fit wider range of case diameters than any other configuration. Low-cost "Fan Tops" are designed for fast, economical press-fit installation without tools. Bulletin 131.

UP SERIES—FOR POWER TYPE TRANSISTORS AND DIODES

UP Series design gives maximum dissipation in medium power applications at lower cost than comparable finned extrusions. Staggered-finger configuration—a design exclusive with IERC—allows maximum efficiency in both natural convection and forced air at less weight and volume. Increased dissipation can be achieved by mounting dissipators back-to-back on a bracket. Standard finish is black anodize. Bulletin 134; test report 172A.

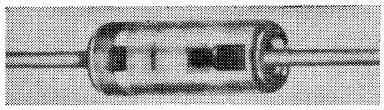
SILICON DIODE



GERMANIUM DIODE

A wide choice of popular characteristics in low power germanium and silicon diodes is available immediately from Ohmite stock. Both the germanium and silicon types are supplied in the subminiature, hermetically sealed glass envelope (see diagram). The silicon envelope is light-shielded.

High stability is achieved through temperature cycling and aging. All units must meet severe environmental, electrical and mechanical requirements with a liberal safety factor.

GERMANIUM DIODES — Ohmite supplies the gold-bonded variety. Power rating is 80 mw at 25°C except where otherwise indicated. Operating temperature range is −65°C to +90°C.

SILICON DIODES — Employ either the alloy or diffusion method of junction formation. Power rating is 400 milliwatts at 25°C except where otherwise indicated. Operating temperature range is −65°C to +150°C.

DIODE METERSAVER PROTECTS METERS

Designed to protect sensitive (high internal resistance) meters against burnout due to overload even where potential is reversed. Introduces negligible error. Consists of 2 silicon diodes in compact case with leads and lugs. Connects across meter terminals without regard for polarity. Shunts excess current around meters—for example, can convert 200 times overload to 3 times overload. Allows use of less expensive meter fuses. Can be used with meters of low internal resistance but use of series resistor is then recommended.

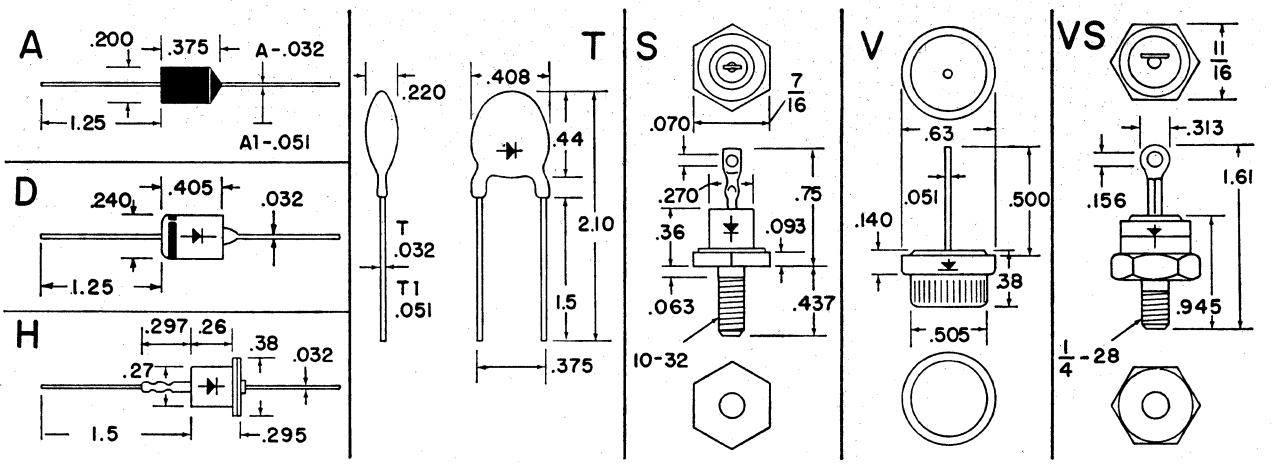
MALLORY Silicon Rectifiers



Mallory silicon rectifiers are produced by the diffused junction process. This process provides superior operating characteristics when compared to alloy junction types. An exceptionally broad range of case styles is available to suit most installation requirements. Styles A and T have "cold" cases which offer outstanding humidity resistance and have withstood the rigorous "Joy Bomb" test. All types exceed rated JEDEC standards.

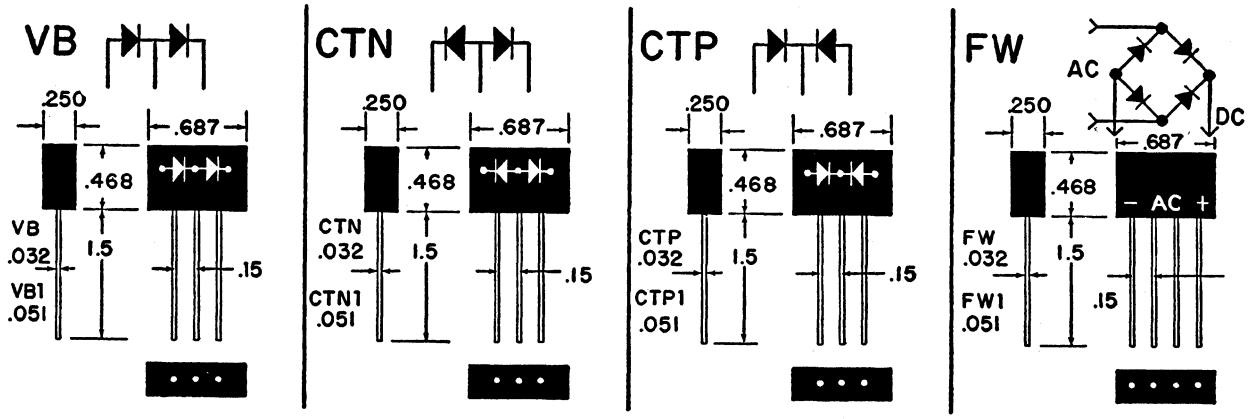
MALLORY Packaged Rectifier Circuits



Mallory pre-packaged rectifier circuits offer outstanding advantages to both the circuit designer and the service technician. The circuits are composed of carefully selected and matched diffused-junction silicon rectifiers. This ensures a balanced operation difficult to attain with individual rectifiers. In addition, size is smaller than the equivalent number of individual rectifiers. In all cases, there are fewer solder joints to make. Quality is guaranteed by Mallory, the pioneer in pre-packaged rectifier circuits.

There are four basic circuits available: Voltage doublers, full-wave circuits in both center-tap negative as well as positive, and full-wave bridge. A full range of inverse voltages and output currents are listed.

Cases for all types have the same external dimensions and are made of specially formulated pre-formed plastic. High density end fill ensures maximum humidity protection. The cold case design avoids stray shorts to other nearby components. The dense packaging material provides excellent heat dissipation.

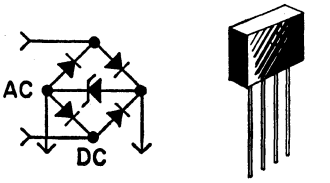
CUSTOM SEMICONDUCTOR PRE-PACKAGED CIRCUITS



In addition to the standard pre-packaged circuits shown above, Mallory can supply a wide variety of custom circuits. For example, a zener diode can be added to the FW circuit in order to provide a positive control on the DC output. In order to specify such a device, select the output voltage desired from 6.8 to 200. Then, select the current output of 1.5, 2 or 3 amperes. A typical rating is FWZ10 having an output of 10 volts and 1.5 amps. For further data, contact Mallory. Any combination of up to five semiconductors can be enclosed in a single package.

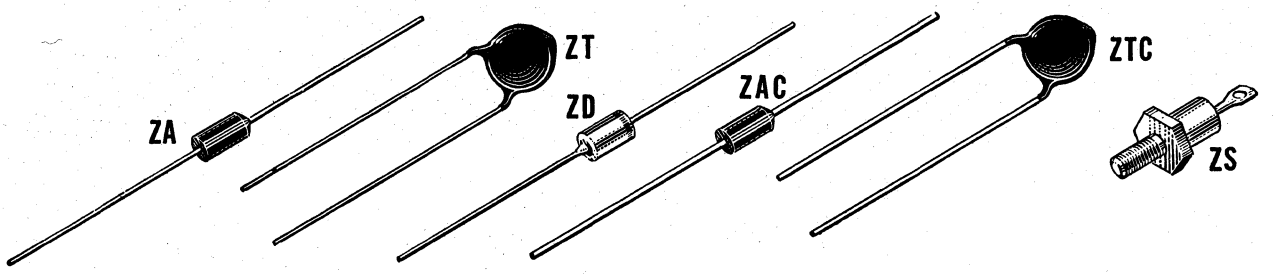
MALLORY Silicon Zener Diodes



SILICON ZENER DIODES

Mallory zener diodes are produced by the diffused junction process which offers superior operating characteristics compared to the alloy junction type. Three power ratings are supplied: 1, 3, and 10 watts. Four basic case styles are available. The "cold" case styles (ZA, ZAC, ZT, and ZTC) offer outstanding performance at relatively low cost. All types offer low thermal resistance and excellent forward characteristics. Rugged cell construction allows high surge capabilities. All types exceed MIL requirements. Select style and wattage required, then specify tolerance by suffix letter. Values shown are ±20% (no suffix), specify A for ±10%, B for ±5%, or C for ±1%. Also available in matched pairs on special order.

TYPE ZA

One-watt, cold case type designed for high density packaging in commercial and military applications. Cold case eliminates need for insulating sleeve and provides excellent heat dissipation and humidity protection. **Case Size:** .200″ dia. x .375″. **Leads:** .032″ dia. x 1.25″ (min.).

TYPE ZT

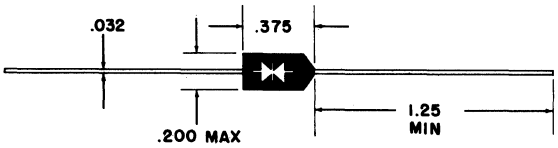
Dual Trigger Diodes



Mallory Dual Trigger Diodes are symetrical three-layer avalanche devices used to control silicon controlled rectifiers and "Bi-switches." The device exhibits a unique characteristic in having a symetrical switching mode which "fires" in both directions. This symetrical action takes place whenever the breakover voltage is exceeded on either side of a cycle. Thus, it is able to trigger two SCR's or a bi-switch (which is essentially two SCR's in a single package). The average power dissipation at 50°C is 1 watt with a peak current capability of 1 amp for 20 microseconds.

The dual trigger offers a particular advantage to the design engineer: It reduces the number of components required in a triggering circuit and thus improves the reliability of that circuit. In addition, the dual trigger reduces the overall cost of the triggering circuit.

Breakover voltage is quite symetrical being within 5% of the nominal rating in either direction. Furthermore, the dual trigger is relatively unaffected by deviations in either ambient or operational temperatures. This is because the temperature coefficient is only 0.02%/°C.

The Mallory dual trigger is especially applicable to dense packaging because it utilizes a "cold case" design. This is a precision molded insulated case which exhibits very high humidity resistant qualities. Thus, the device may be applied to both commercial and industrial applications.

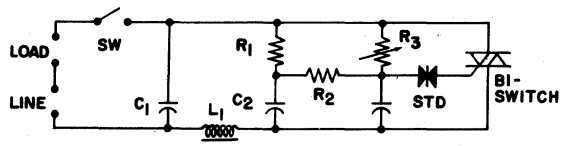
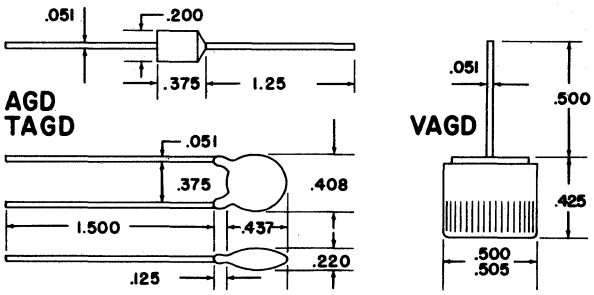
TYPICAL LIGHT DIMMER



Amp-Gate* Diodes



The Mallory AMP-GATE* DIODE is actually a very low voltage regulator. The semiconductor junctions are a combination of forward biased p-n types in series. When the voltage across the diode is raised from zero, only a slight amount of current is drawn in the forward direction until the critical voltage is reached. At this point, the device goes into a high-conduction state. The nominal critical voltage at room temperature is 1.55 volts. However, as the temperature of the device increases, the critical voltage decreases 2Mv/°C. Thus, the device exhibits a negative temperature coefficient. The operating temperature range is −35° to +100°C. and over this range the AMP-GATE DIODE operates as a highly efficient shunt.

These operating characteristics lend themselves ideally to fast-charging circuits for nickel-cadmium batteries. One of the disadvantages of nickel-cadmium batteries is that they can be permanently damaged if fast charging cycles are used. Until the development of the AMP-GATE diode there was no simple or economical means to start the charge rate at a high level and taper off the level as a full charge was reached. Now it is possible to construct a system where charging times can safely be reduced from 17 hours to as little as *one hour!*

A fast charging circuit utilizing the AMP-GATE diode requires a constant current power supply. In addition, each battery under charge must have the proper AMP-GATE diode connected in parallel with it. Since the AGD is sensitive to temperature, it is vital that the proper heat sink be used with the device. In order to determine the precise heat sink to be used, you must establish which battery is to be charged, the ambient temperature, end of charge voltage and current, and temperature rise in the AMP-GATE diode. This is a simple calculation, however it is necessary to have the proper nomographs. These are available without charge from Mallory Distributor Products Company, Box 1558, Indianapolis, Indiana 46206.

Characteristic curves and a typical circuit are shown in the illustrations below. Other applications are feasible. For further technical details, contact Mallory.

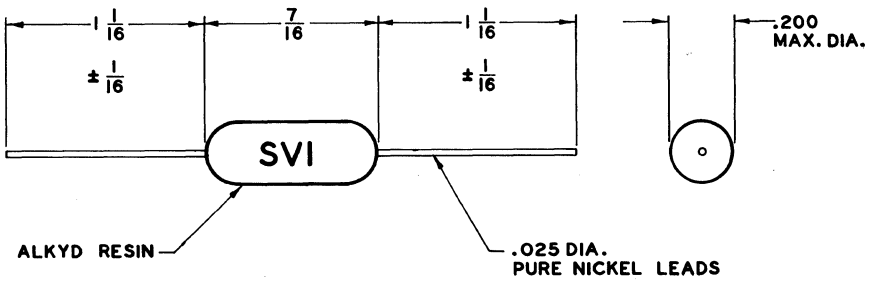
SV1 Silicon Varistor as compared in size to 25¢ piece. Chart shows its I vs E characteristics over four decades.

SCHAUER SV1 SILICON VARISTOR

SV1 Varistor consists of matched silicon junctions connected in parallel and oppositely poled. This voltage variable resistance goes through four decades of current for a half volt change in signal and makes possible its use as a single component to convert linear AC or DC information into logarithmic information following the curve $I_{ma} = e^{26(E-.59)}$ between the range I = .02 ma to 200 ma.

ELECTRICAL CHARACTERISTICS — Test limits: 50 microamperes max. at .2V D.C., 225 milliamperes min. at 1.0V D.C. Dissipation: ¾ watt at 25°C, ¼ watt at 100°C. Maximum ½ cycle surge current, 25 amps. peak.

SV1 is encapsulated with an alkyd molding compound. An inner epoxy seal, long leakage paths, and high pressure molding assure reliable performance in all environments.



Dimensions of SV1 Varistor. Also applies to Schauer 1 watt Zener Diodes. Zener cathode terminal is marked by red dot.

SARKES TARZIAN JEDEC Silicon Avalanche Rectifiers

All of the silicon rectifiers listed below are supplied with avalanche characteristics as standard. They are direct replacements, electrically and physically, for ordinary silicon rectifiers, yet they provide important benefits to you and your products, **at no** extra cost.

Overvoltage protection is built into the rectifier. Transient voltage induced failures are virtually eliminated because these units avalanche at voltages well below the destruction point. The overvoltage spike is dissipated through the junction at a point below the critical voltage stress across the edge of the junction.

Lower circuit costs are readily achieved. When avalanche rectifiers are used suppressor and balancing devices, such as resistors, capacitors, R-C networks, etc., are no longer needed. In addition, their elimination improves circuit reliability, due to a reduction in number of components and interconnections.

Dependable performance is assured. Over 10,000,000 of these devices already have been delivered and are in actual use in the field. They are now routinely available from high volume production lines.

All Tarzian Silicon Rectifiers are supplied with avalanche protection at no extra cost. For additional types, not necessarily covered by JEDEC numbers, see the following pages.

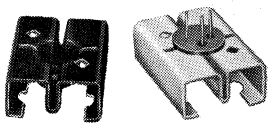
Semiconductor Coolers

CIRCUIT BOARD SNAP-ON HEAT SINKS



Types 140, 141 and 142 fit popular press fit diodes and SCRs as well as the JEDEC TO-8 case style. The cross slot design permits semiconductor cavity to expand cylindrically thus hugging the case diameter closely, ranging from .480 to .505.

Series 140 Heat Sinks provide thermal resistance as low as 10°C/w. A spring retention clip may be used in applications where cooling is critical and the very best thermal contact between case and sink is needed. MATERIAL is the highest thermally conductive commercially pure aluminum, 1100 alloy. FINISH: black anodize is standard but no finish parts are available from factory stock.

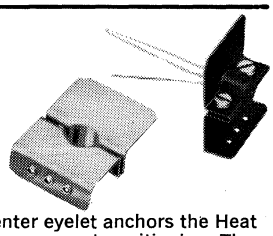
CIRCUIT BOARD COOLERS FOR TO-5 TRANSISTORS



Where space on the circuit board is at a premium, the new Type 150 Heat Sink requires only 0.375 in.^{2} area. In applications permitting 1⅜" height above the circuit board, this lightweight, economical Cooler has good performance characteristics with TO-5 cases; case rise 40°C @ 1 w with bright aluminum natural finish or 34°C @ 1 w with black anodize finish. Two #4 x ¼" long sheet metal screws are used to solidly clamp the TO-5 case in the Type 150 Heat Sink. Three eyelets extruded from the mounting base provide keying to the circuit board. A sheet metal screw in the center eyelet anchors the Heat Sink to the board and the two outer eyelets are then set for permanent positioning. These coolers are provided without screws.

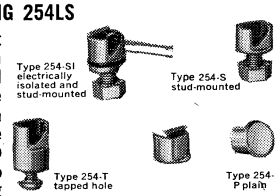
THERMAL RETAINERS FOR TO-5 CASES—WITH LOCKING SPRING 254LS



The TO-5 case style, including the Kovar header type, is best heat sinked at the bottom face of the flange since the silicon die is attached to the header. Series TR-254 Heat Sinks all provide this preferred contacting method. All five types are intended as thermal links from the transistor case to a cooler or to a chassis member acting as the heat sink. Type 254-SI has built-in electrical isolation with WAKEFIELD Delta Bond 152 Thermally Conductive Adhesive used to bond the Type 254-R to a stud. Type 254-LS Locking Spring is inserted behind the transistor. Type 120 Joint Compound should be applied to transistor header before insertion. MATERIAL: Zimac 3. Type 254-LS Locking Spring material: stainless steel. Stud material in Type 254-S1: 6061-T6 aluminum with gold irridite finish. FINISH: Nickel plate. Mounting hardware is not furnished.

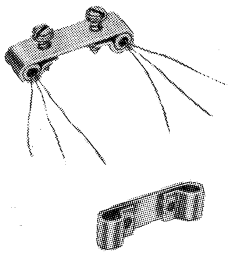
THERMAL CLAMP FOR TO-1 CASES



For push/pull driver or low power output applications using TO-1 case style transistors, this versatile thermal clamp provides solid, economical retention of the cases to a chassis or heat sink. Two cases can be mounted in the Type 255 Thermal Clamp. 3°C/w per TO-1 transistor is obtained or 1½°C/w for both. Mounting centers are kept broad to better distribute the power from the two transistors across the chassis or heat sink. This also permits sufficient circuit board space for mounting components common to the transistors. #6 sheet metal or self-tapping screws can be used from the chassis thru the Type 255 Clamp. Or, #4 machine screws with nuts can be used from either direction. (Screws are not furnished.) MATERIAL: 1100 aluminum alloy. FINISH: none.

DELTA BOND 152 THERMALLY CONDUCTIVE ADHESIVE

An adhesive with high conductivity to be used: As a general adhesive — For bonding semiconductors to chassis heat sinks — Fabricating heat sinks or thermal links — For permanent bonding of all materials with highly thermal conductive interface. Delta Bond fills the need of a general purpose adhesive. It produces a rigid high strength bond to most materials when cured. Being 100% solid adhesive, it is effective on porous and non-porous surfaces such as metals, glass, ceramics and most plastics. The main features are high thermal conductivity, excellent di-electric strength and a coefficient of thermal expansion similar to that of aluminum and copper.

WAKEFIELD THERMAL JOINT COMPOUND

Improved thermal conductance from semiconductor to cooler may be obtained by applying a light coating of WAKEFIELD Thermal Joint Compound on the mounting surface. This Compound has a thermal conductivity approximately four times that of silicone grease.

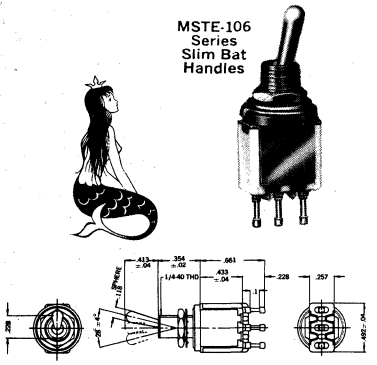
ALCOSWITCH

MANUFACTURED TO MEET MINIATURIZATION REQUIREMENTS

SPDT

MSTE-106 Series Slim Bat Handles



A waterproof series with a conservative 6 Amps rating. This thin profile switch features new turret lugs to simplify wiring. The highest standard has been attained in the miniature switch field.

"E" SERIES FEATURES FOR SPDT, DPDT, 3PDT AND 4PDT MODELS

Another "first" — the new "E" Series with the features most wanted in miniature switches. Repeatedly, ALCOSWITCH seeks out the new, the different and the dramatic engineering departures that build better switch products — in fact, our "firsts" have made the ALCOSWITCH the best engineered and most used in the industry. By every comparison ALCOSWITCH stands alone as Number One, and with the introduction of the "E" Series it unquestionably has no equal for precision-made switches in production quantities.

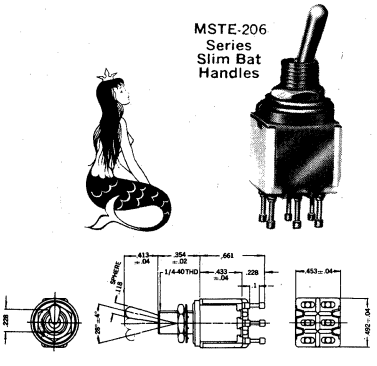
ALCOSWITCH

DPDT

MSTE-206 Series Slim Bat Handles



Compact, ½" square, low loss case with solid silver contacts makes this switch ideal for critical applications. It's the "perfect switch" with new features in the same price field that has made ALCOSWITCH the leader.

"E" Series Features Continued

WATERPROOF — Neoprene "O" rings located inside the toggle and on the shoulder. Terminals permanently sealed.
NO TEAR-OFFS — A mechanical shoulder on the bottom of the bushing prevents "tear-offs" where one-nut mounting is employed.
VOLTAGE BARRIERS — A new case design features high voltage barriers between terminals inside as well as outside.
HIGH IMPACT CASE — New plastic material capable of withstanding a higher impact; guards against accidental damage.
LOW LOSS CASE — Features extremely high resistance between terminals and case ground.
HIGH TEMPERATURE CASE — Ideally suited for printed circuit applications — prolongs soldering time.

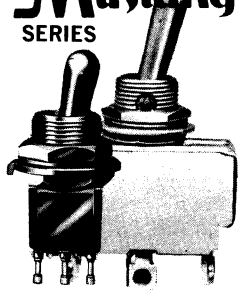
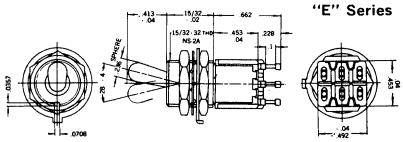
Mustang SERIES



3 & 4 Pole case sizes same as "E" Series



The **MUSTANG** series is for designers who prefer the feel of a standard toggle switch but have space limitations behind the panel. The Mustang case size is the same as the ultra-miniature MSTE Series, however the mounting requirements are the same as the standard switches with 15/32" bushings. This new Alcoswitch concept is popular in the 3 Pole and 4 Pole series where other non-miniature switches tend to be bulky in size. (See size comparison in photo)

ALCOSWITCH IS FIRST WITH A FULL LINE OF MINIATURE ELECTRONIC SWITCHES

FIRST in ultra-miniature switches is the position of innovation and creative achievement which ALCOSWITCH has attained during the past ten years. Our broad experience and leadership is based upon the millions of ALCOSWITCHES being used today. Here, on these pages is ample evidence that ALCOSWITCH has specialized in miniature switches and originated many ingenious ideas to make engineering life more creative for the modern electronic industry.

Alcoswitch thinks MINIATURE . . . Alcoswitch thinks FIRST . . . CREATIVELY!

ALCOSWITCH

ALCOSWITCH

MANUFACTURED TO MEET MINIATURIZATION REQUIREMENTS

ALCOSWITCH

With the coming of the space age, weight, size, precision, stability, and difficult operating conditions place a mighty "squeeze" on electronic design. Along with miniature circuit components, engineers have to fit switches into exceedingly small areas. Today, new materials, new manufacturing techniques, new components and new switches enter into the final engineering product requiring miniaturization.

As a result, modern **ALCOSWITCHES** have been created to reduce size and weight to a minimum and bear little physical resemblance to the older switches designed during the 1930's and 1940's. These **ALCOSWITCHES** are the new shape of miniature switching devices, not of the future, but what is currently available in quantity for laboratory testing and production use.

SPDT AND DPDT SERIES

A new **ALCOSWITCH SERIES** of high quality ultra-miniature toggle switches is ideally suited for limited space requirements. Conservatively rated at 5 amperes @ 115 VAC.

3PDT AND 4PDT SERIES

The feature of the one-piece body construction is to ultra-miniaturize the case size and still be consistent with good engineering specifications. In the switch mechanism, the toggle is linked directly to the movable contact member, providing positive make and break. The switch is designed to obtain positive detent action for improved "operator feel". Solid silver contacts and terminals are well-spaced for clearance, easy wiring, and good soldering ability.

ON-ON-ON

This unique switching arrangement is completely enclosed in a compact black phenolic housing, and in certain applications takes the place of a 3-position rotary switch. Features a slim miniature bat handle, solid silver contacts and terminals.

ENGINEERS: If dimensions or specifications are critical, obtain drawings from ALCOSWITCH, Lawrence, Mass.

Nominal Ratings:
5 Amps 115 V. AC

Single or multi wafer switches designed for applications where a large number of centralizer circuits must be controlled in consecutive steps. All terminals marked with two-digit number. The first digit denotes the wafer position, moving from front to rear of switch. The second digit indicates radial position of the terminals moving in a clockwise direction from the keyway. Terminals numbered 11, 21, 31, etc. are the common or line terminals on most switches and are also marked "off." On MS25002 type switches, the adjustable indexing mechanism provides a flexible arrangement of different circuits. By positioning two screws in the indexing plate on the base, stop positions can be provided to fit specific applications. Completely universal, can stop at any position. Additional variations of listed switches obtainable upon request. Can be furnished with 1 up to a maximum of 6 wafers each with 8 positions, 7 "on" and 1 "off." 42 circuits can be controlled by one 6 wafer 8 position switch. 15/32" bushing.

MAGNETIC PROXIMITY SWITCHES

Precision, fast-acting devices, adaptable to sequential control functions on machine tools, packaging, material handling and equipment or for similar industrial devices. Rugged construction, encapsulated to assure freedom from contamination by cutting oils, dust, powder, metal chips, etc., this series will operate up to hundreds of millions of cycles at temperature ranges from —30°C to +105°C. Switches will actuate when brought into proximity with ferrous metals or other magnetic materials. Operating sensitivity in nom. 1/8" make, 1/2" break. No mechanical linkage is required for operation. Typical actuators include rotating cams, wheels and indexing tables, reciprocating arms, push rods, die sets, jaws and assembly line objects such as food and beverage cans, stampings and components. Speed (max.): 200 cycles/sec., repeatability within .005". Switch elements are hermetically sealed in glass, then unit is potted in epoxy resin. Case is special rubber and plastic compounding which is impervious to oil, water, gas and all common solvents.

COUNTING — POSITION LIMITING — SEQUENCE CONTROL HERMETICALLY SEALED — MOUNTS IN ANY POSITION — NO MECHANICAL LINKAGE NECESSARY.

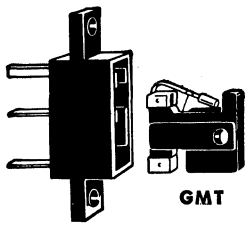
BUSS GMT Fuses — HLT Fuseholders

Signal Indicating

Alarm Activating



For multiple circuit apparatus where space is at a premium

GMT fuses and HLT fuseholders permit multiple mounting of fuses in limited space, for protection of communication equipment, business machines, computers, control circuits or any equipment operating at 300 volts or less.

Holders take panel mounting space of only ¼ inch horizontal by 1 15/32 inches vertical.

Fuses give visual indication when blown by release of a spring indicator. The spring carries a colored plastic flag, in a different color for each fuse ampere rating.

The indicator spring when released makes contact with an alarm terminal in the fuseholder, which can be connected to activate a signal circuit.

Blown fuses are readily replaced without use of insulated tools. When mounted on minimum centers, removal of fuse is easy by use of a wire hook.

LIMITRON FUSES

For Protection of Semi-Conductor Rectifiers

Another Outstanding Development by the Makers of BUSS Fuses

These Limitron fuses are especially designed for the protection of semi-conductor rectifiers. They provide extremely fast opening on overload and fault currents, with a high degree of restriction of the let-thru current.

If each diode is protected by a Limitron fuse, the fuse will open very quickly when the current drawn exceeds the rating of the diode.

Thus when a short-circuit occurs in a diode the fuse opens and takes that diode out of the circuit. This protects other good diodes in the rectifier which might otherwise be damaged.

For time-current characteristic charts ask for BUSS bulletin HLS.

Test specification for all types of BUSS rectifier fuses — carry 100% of rating; open at 1000 seconds on overloads between 120% and 180% of rating; open within 1 second at 250% of rating.
